## APPENDIX ICE

## REQUIREMENTS FOR INTERNAL COMBUSTION ENGINES

This Title V facility contains a stationary internal combustion engine that has been exempted from the requirement to obtain an air construction permit because it qualifies for one of the categorical exemptions listed in Rule 62-210.300(3)(a), Florida Administrative Code (F.A.C.). However, it is included in this permit as a regulated emissions unit because it is subject to the following federal rule:

- 40 CFR 60, Subpart JJJJ—Standards of Performance for Stationary Spark Ignition Internal Combustion Engines.

The below listed engine is subject to the specified federal rule.

| E.U. ID No. | Brief Description of Engine | Year Built | Displacement or Horsepower | Rule Applicability |
|---|---|---|---|---|
| 003 | "New" Stationary Spark Ignition (SI) RICE Engine (Subaru SP170 pressure washer) | 2009 | 5.7 | JJJJ |

The engine listed above is currently demonstrating compliance with the emissions limitations of the applicable federal rule through the retention of a manufacturer's certification statement. So long as that certification is able to be retained, no additional compliance demonstration is required. At such time that the manufacturer's certification is no longer valid (i.e. due to operation or maintenance practices that are inconsistent with the manufacturer's recommendations), the permittee shall begin demonstrating compliance with the standards listed in the applicable federal rule (included in the appendices as an enforceable part of this permit) in a manner that is prescribed by that rule.
