b. Appendix B. General Conditions;

c. Appendix C. Common Conditions

d. Appendix D. Common Testing Requirements; and

e. Appendix Facility Monitoring Plan updated February 2015.

3. Capacity. The maximum facility process or throughput rate of 20 tons per hour averaged monthly is hereby removed. For compliance testing only, the maximum facility process or throughput rate shall not exceed 25 tons per hour. [Rules 62-4.070(3) and 62-210.300(1), F.A.C., and Application No. 0390041-006-AC]

{Permitting Note: Emissions testing was performed on June 19, 2014 at the previous maximum permitted capacity of 20 tons per hour, which is less than the new maximum permitted capacity for testing purposes of 25 tons per hour. In this case, subsequent emissions unit operation is limited to 110 percent of the test rate (22 tons per hour) until a new test is conducted. [Rule 297.310(3), F.A.C.]}

TESTING REQUIREMENTS

4. Initial Compliance Tests. No new testing requirements.

{Permitting Note: The operating permit for this emissions unit already requires annual testing. Initial compliance testing is not being required because no construction occurred and no physical changes were made to the facility with this permit. Also, production records show that the throughput rate is still well below 22 tons per hour. Operation is limited to 22 tons per hour until the emission unit successfully passes the next annual required VE testing in 2015 at a higher rate.}

RECORD KEEPING

5. Production Recordkeeping Requirement Revoked. The requirement to record and maintain records of the facility throughput averaged monthly is hereby removed. [Application No. 0390041-006-AC]

STATEMENT OF BASIS

This air pollution construction permit is issued under the provisions of Chapter 403 of the Florida Statutes (F.S.), and Chapters 62-4, 62-210, and 62-212 of the Florida Administrative Code (F.A.C.).

Executed in Pensacola, Florida.
