Barbara - Attached is a draft AC and a draft/proposed Title V revision for the above referenced facility. I have signed on behalf of Jeff and it can be clerked and issued.

Jeff - This was a simple AC/AV revision to incorporate excess emissions for CT-2B related to tuning of the DLN combustors. It also reduces CO and VE testing requirements when operating less than 400 hours on natural gas.

Al – All the edits were done in your project folder.

Thanks,
Syed
