A.J.

I looked at our rules & guidance documents and spoke to the other permitting engineers and we all came to the same conclusion that an air construction permit is not required in this case. I can withdraw the AC application or, if you wish, the RO for the facility can write a letter requesting the withdrawal. Let me know how you wish to proceed.

Ed Svec

Ed,

Per our phone call, the preconstruction permit application submitted with the Title V renewal was in response to the highlighted portion of the email below. I spoke with David Read on May 9, 2014 and confirmed the requirement with him then.

Mr. Laryea, the Department authorizes Indiantown Cogeneration, L.P. to continue to use the dispersant (see attachments) to improve the effectiveness of the lime slurry used for sulfur dioxide control at Indiantown Cogeneration Plant until such time that the continued use of the dispersant can be incorporated into your Title V air operation permit. Further, the Department will require that Indiantown Cogeneration, L.P submit an air construction permit application to incorporate the use of the dispersant into your Title V air operation concurrently with your Title V air operation permit renewal application in May.

Please feel free to call or email if you have any questions.

David, thanks for getting back to me on the above mentioned project. I am attaching the following correspondence to bring you up to speed on the project..

1) Indiantown letter dated 8/10/2011 to the department seeking approval for a trial use of surfactant.
2) DEP approval e-mail dated 9/11/2011
3) Indiantown letter dated 9/30/2013 see approval for permanent used of the surfactant.

The facility's will incorporate the use of the surfactant into the Title V permit this renewal cycle. So up until the expiration ( December 31, 2014) of the current permit, the facility will appreciate authorization to use the product..

Thanks

Nicholas Laryea
