Nedin,

I wanted to follow up on the progress of our sandblast facility. We were unable to completely rebuild the facility as planned but we were able to repair it so that we are in compliance with the terms of our permit. I have attached a few photos for your convenience.

As always, feel free to give me a call or e-mail with any questions or concerns.

Regards,

Ms. Vardeh,

As I explained in a voice mail I left for you a few minutes ago, according to your current air permit 1050351-005-AO, "all sandblasting equipment operations shall be conducted in the three-sided enclosed building with containment screening" (Specific Condition A.1.a.) and "as an indicator the three-sided enclosed building is adequate, there shall be no visible emissions (5% opacity) emitted from the building. If visible emissions are emitted from the building, it will not be a violation in and of itself, but an indicator that additional controls and/or measures may be required" (Specific Condition B.5.).

As Department staff witnessed on 10/06/10, your current sandblasting building is in a bad shape and does not provide necessary containment. As such, please be advised that conducting sandblasting in the current building would violate the above-listed conditions of your permit. In order to avoid possible enforcement action, please refrain from conducting any further sandblasting until it can be done in the new structure. Another option would be to temporarily fix the old structure to the point where sandblasting could be done to comply with conditions A.1.a. and B.5.

If you have any questions, please feel free to contact me.

Regards,

Nedin Bahtic

Nedin,

I spoke with our contractor after you left yesterday. They expect to begin construction of the new sandblasting facility within the next 60 days and don't expect the project to take more than 60 days to complete. I hope this information helps. Please let me know if you have any questions or other concerns.
