COMMENTS: Mr. Troy Simpson met me at the facility and provided me with access to all requested records. The facility was in operation at the time of my inspection, batching operations were occurring. This facility produced approximately 21,000 tons of product during the past six months. Dust control logs, baghouse inspection logs and BWP daily inspections logs were also available for review. H, S & E Resources, Inc. performed the most recent Visible Emissions (VE) testing on July 6, 2008. The results of this test indicate that the facilities dust control equipment is operating correctly.
