COMMENTS: An EPA Method 9 visual emission test was performed for the plant's cement silo, fly ash silo, and weigh hopper (batcher) on June 9, 2010. No visual emissions were observed at the time of this test. During this test 13.46 tons of fly ash and 27.05 tons of cement were loaded into the facilities two silos, and one truck was loaded with a full load at the weigh hopper. The test results were delivered to the department for review on June 18, 2010. This facility has a bag house for each silo and a separate dust collector for the weigh hopper. Each vent was inspected at the time of this inspection, and no evidence of previous dusting was observed. The facility has well maintained records for fuel consumption by the vehicles (the plant is powered by the electricity power grid), and material processed on a monthly basis, but since the last inspection the plant has been shut down due to limited concrete orders. Dust control logs, bag house inspections logs, and BMP daily inspection logs were also available for review. The facility has wind breaks/binblock enclosures for the aggregate, and all stockpiles were maintained lower than the enclosures to prevent wind erosion/entrainment of aggregate material. The weigh hopper/batcher is equipped with an enclosure, chute, and a dust collector. The enclosure appeared in good condition, but no trucks were loaded at the time of this inspection. No new or modified process equipment has been installed since the last inspection
