Stack Emissions						
1. Were visible emis	sions tests conducted during the	is site visit according to EPA Meth	nod 9 (Ref.: Chapter 			
2. Are emissions from	m silos, weigh hoppers (batche	rs), and other enclosed storage and	conveying equipment			
controlled to the extent necessary to limit visible emissions to 5 percent opacity? No 3. During visible emissions tests of the silo dust collector exhaust points was the loading of the silo conducted						
at a rate that is representative of the normal silo loading rate, or at least at the minimum 25 tons per hour rate, unless such rate is unachievable in practice?						
4. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer to this question is "Yes", then continue on to questions 4.a) and 4.b) below. If answer is "No" then						
skip 4.a) and 4.b)	and continue on to question 5.)
