COMMENTS: VE test of EUs 002, 003 and 004 saw no emission at the dust collector vents. However, during the VE of the flyash silo (EU-004) there was a leak at the top of the silo which emitted dust. Once the consultant notified the facility, the truck stopped pumping and maintenance personnel climbed up and secured the leak. A new part will be installed, according to facility contact. Once the test resumed, no other potential violations were noted.
