**COMMENTS:** On 6-28-06, SG witnessed visible emissions tests for 3 new silos, 1 new weigh hopper/truck load-out, and 1 existing weigh hopper/truck load-out that were performed by South Florida Environmental Services (SFES) using Method 9. Each of the 3 new silos had a top-mounted baghouse, while each of the 2 weigh hoppers/truck load-outs had a central dust collector. SFES performed a 30-minute VE test for each dust collector exhaust point. SG performed 12-minute VE tests for the 3 new silos and did not detect any visible emissions.

On 6-9-06, DEP received the NOI for General Permit that included the new process equipment. Since construction of the new process equipment began in mid-May 2006, this NOI was deemed late and this issue had already been included in a case referral submitted on 6-5-06.

The site was mostly paved and damp; thus, traffic kicked up only a little dust. The facility had a small pile of waste concrete which was periodically hauled off site. After the old plant (i.e., EU 003 and EU 005) is torn down, the facility will relocate the truck wash from near the exit driveway to a central location to minimize dirt drag-out onto Glades Cut-off Road. SG did not detect any fugitive dust emissions.
