2. Are emissions from silos, weigh hoppers (batchers), and other enclosed storage and conveying equipment						
controlled to the extent necessary to limit visible emissions to 5 percent opacity?						
at a rate that is representative of the normal silo loading rate, or at least at the minimum 25 tons per hour rate, unless such rate is unachievable in practice?						
4. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer

a) Was the batching operation in operation during the visible emissions test? Yes No						
b) During the visible emissions test, was the batching rate representative of the normal batching rate and duration?						
	5. If emissions from the weigh hopper (batcher) operation are controlled by a dust collector, which is separate					
from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration? Yes No
