COMMENTS: OCEPD arrived at the facility at approximately 7:30 AM to perform VE's (5). Personnel present included Michael Biagini, Regional Operations Manager/North Florida Region, and Kenny Alles, representing Arlington Environmental, Inc., the consultant. All observed opacities were 0%, and the loading rates were acceptable. The two compartments in the cement silo were each loaded with 1/2 truck of Portland Type VII, with the total truck containing 26.270 tons. The flyash silo was only loaded with 1/2 truck of flyash material (~13-tons), with the remainder of the truck to be utilized at the Winter Garden Site, the next facility to be tested at approximately 10:00 AM. It should be noted that upon returning to OCEPD, John Kasper, Engineer III, was consulted to determine if additional EU's should be added to satisfy the application data and additional EU's observed during the VEs. ARMS was corrected from 2-EU's to 5EU's, with the slag silo being listed as Inactive (slag silo was not tested - EU-001). The central dust collector & the weigh hopper dust collectors, respectfully, were collectively listed as EU-004. There were no noticeable odors or dust leaving the property. Sprayers were being utilized in the aggregate piles on the property.
