Stack Emissions						
1. Were visible emis 62-297, F.A.C.)?-	ssions tests conducted during this	s site visit according to EPA	Method 9 (Ref.: Chapter 	□No		
2. Are emissions from silos, weigh hoppers (batchers), and other enclosed storage and conveying equipment controlled to the extent necessary to limit visible emissions to 5 percent opacity?						
3. During visible emissions tests of the silo dust collector exhaust points was the loading of the silo conducted						
at a rate that is representative of the normal silo loading rate, or at least at the minimum 25 tons per hour rate, unless such rate is unachievable in practice? \bigsymbol{\Bar} Yes \bigsymbol{\Bar} No						
4. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer to this question is "Yes", then continue on to questions 4.a) and 4.b) below. If answer is "No" then						
a) Was the batching operation in operation during the visible emissions test? b) During the visible emissions test, was the batching rate representative of the normal batching rate and duration?						
5. If emissions from	the weigh hopper (batcher) oper	ration are controlled by a dua	st collector, which is separate	_] NO		
from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration? Yes No
