COMMENTS: The inspector conducted VEs on the block plant and the readymix plant on 9/1/06. The block plant had an opacity of 0% and the loading rate was 32.47 tph. The readymix plant had an opacity of 0% and the loading rate was 32.16 tph. The yard at this facility is mostly dirt on the south side of the property. It was wet down. Part of the yard that is used for block storage is paved. A shroud is used at the drop point to the trucks for loading of the final product. No emissions were observed during the batching process. No unconfined or uncontrolled emissions were observed during the test. The tons of cement produced at the readymix plant was 19,200 tons and operated 2,915 hours for one year. The tons cement processed at the block plant was 22,308 tons and operated 6,864 hours for one year. The time for the yearly numbers was not provided; therefore, it is assumed that the numbers provided from the consultant is the most current twelve month period. Testing was conducted 4 days after the required date instead of the 60 days prior to the AGP notification submittal date anniversary. The consultant was notified of the testing date requirements to help meet future testing date requirements.
