Ilka Bundy	2/7/13 & 2/27/13
Inspector's Name (Please Print)	Date of Inspection
	2/27/2014
Inspector's Signature	Approximate Date of Next Inspection

COMMENTS: Ilka Bundy met with Dart Morales in the morning and Kevett Mickle in the afternoon, both from Grove Scientific Engineering, on February 7, 2013, to audit visible emission tests on EUs 003, 008, and 011. Ilka met with Bruno Ferraro, Grove Scientific and Engineering, on February 27, 2013, to audit the visible emission tests on EUs 002 and 009. All other emission units at this facility are in Long Term Reserve Shut Down until the economy improves, or there is a need for special projects. All emission units had an observed opacity of zero percent. All loading rates were acceptable. The inspector observed some fugitive emissions coming from the Ready-Mix cement silo bag house area during the compliance test on the fly ash bag house conducted on February 27, 2013. The inspector spoke to Brad Coolidge, A1 Block Corp. Safety & Sales, regarding the incident. It appears that at the end of the tanker's pumping cycle, excess air from the tanker is causing cement dust that has settled inside the housing

from the bag house to be pushed out the air vent. Mr. Coolidge agreed with Bruno Ferraro that the inside housing should be cleaned up from the excess cement dust (a house-keeping issue). Mr. Coolidge told the inspector he would have it cleaned out before the end of the day. Since the fugitive dust was intermittent, and at the end of the cement pumping cycle, a VE was not conducted. The yard was fairly clean. This facility appears to be in compliance with their air permit conditions at this time.
