	M	S	
I	N	N	
N	C	C	B. Specific Conditions
			<ul> <li>Unconfined Emissions. The owner or operator shall take reasonable precautions to control unconfined emissions from hoppers, storage and conveying equipment, conveyor drop points, truck loading and unloading, roads, parking areas, stock piles, and yards as required by Rule 62-296.320(4)(c), F.A.C. For concrete batching plants the following shall constitute reasonable precautions: <ul> <li>(a) Management of roads, parking areas, stock piles, and yards, which shall include one or more of the following:</li> <li>1. Paving and maintenance of roads, parking areas, and yards.</li> <li>2. Application of water or environmentally safe dust- suppressant chemicals when necessary to control emissions.</li> <li>3. Removal of particulate matter from roads and other paved areas under control of the owner or operator to mitigate re-entrainment, and from building or work areas to reduce airborne particulate matter.</li> <li>4. Reduction of stock pile height or installation of wind breaks to mitigate wind entrainment of particulate matter from stock piles.</li> <li>(b) Use of spray bar, chute, or partial enclosure to mitigate emissions at the drop point to the truck.</li> <li>[62-296.414(2)]</li> </ul> </li> <li>Comments: The yard was wet; there were no unconfined emissions, from site activity at the time of the inspection.</li> </ul>
			Visible emissions tests of silo dust collector exhaust points shall be conducted while loading the silo at a rate that is representative of the normal silo loading rate. The minimum loading rate shall be 25 tons per hour unless such rate is unachievable in practice. If emissions from the weigh hopper (batcher) operation are also controlled by the silo dust collector, the batching operation shall be in operation during the visible emissions test. The batching rate during the emissions test shall be representative of the normal batching rate and duration. Each test report shall state the actual silo loading rate during emissions testing and, if applicable, whether or not batching occurred during emissions testing. [62-296.414(3)(c), F.A.C.]  Comments: The last test, on 11/30/06, was conducted at a process rate of 25 tph. Based on that test, the facility process rate was limited to 25tph.
			If emissions from the weigh hopper (batcher) operation are controlled by a dust collector which is separate from the silo dust collector, visible emissions tests of the weigh hopper (batcher) dust collector exhaust point shall be conducted while batching at a rate that is representative of the normal batching rate and duration. Each test report shall state the actual batching rate during emissions testing. [62-296.414(3)(d), F.A.C.]  Comments: Emissions from the weigh hopper are not controlled by a separate dust collector.  A separate test n/a was n/a was not conducted at the appropriate rate.
$\boxtimes$	$\overline{}$	_	Each dust collector exhaust point shall be tested annually. New facilities permitted pursuant to Rule 62-210.300(4),
			F.A.C., Air General Permits, shall demonstrate initial compliance no later than 30 days after beginning operation, and annual compliance within 60 days prior to each anniversary of the air general permit notification form submittal date. Existing facilities permitted pursuant to Rule 62-210.300(4), F.A.C., Air General Permits, shall demonstrate compliance within 60 days prior to submitting an air general permit notification form and within 60 days prior to each anniversary of the air general permit notification form submittal date. [62-296.414(4), F.A.C.]  Comments: The test should be completed between 10/30/06 and 12/30/06. The last test was conducted on 11/3006, and the test results were submitted on 12/04/06.
$\boxtimes$			Test Reports The required test report shall be filed with the PCDEM as soon as practical but no later than 45 days after the test is completed. [Rules 62-213.440 and 62-297.310(8)(b), F.A.C.]
			Comments: The last test was conducted on 11/30/06, and the test results were submitted on 12/04/06.

I	M N	S N	
N	C	C	B. Specific Conditions
			The pollution control equipment shall be operated and maintained in accordance to the operation and maintenance (O&M) plan. The O&M plan shall include, but is not limited to:  (1) Operating parameters of the pollution control device; (2) Time table for the routine maintenance of the pollution control device as specified by the manufacturer; (3) Time table for routine periodic observations of the pollution control device sufficient to ensure proper operation; (4) A list of the type and quantity of the required spare parts for the pollution control device which are stored on the premises of the permit applicant; (5) A record log which will indicate, at a minimum:  a. When maintenance and observations were performed; b. What maintenance and observations were performed; and c. Who performed said maintenance and observations. d. Acceptable parameter ranges for each operational check.  [Pinellas County Code, Subsection 58-128]  **Comments: Reviewed records for the months of 1/24/07 through 3/16/07 indicated emission unit in compliance.
			C. General Procedure Requirements and Conditions
			Administrative Corrections. Within 30 days of any changes requiring corrections to information contained in the notification form, the owner or operator shall notify the Department in writing. Such changes shall include:  a. Any change in the name of the authorized representative or facility address or phone number; or b. Any other similar minor administrative change at the facility or emissions unit.  [62-210.300(4)(d)3., F.A.C.]  Comments: Not applicable at this time.
$\boxtimes$			Equipment Changes. In case of the installation of new process equipment, alteration of existing process equipment without replacement, or the replacement of existing process equipment with equipment substantially different than that noted on the most recent notification form, the owner or operator shall submit a new and complete general permit
			notification form with the appropriate fee pursuant to Rule 62-4.050, F.A.C., to the Department. [62-210.300(4)(d)4., F.A.C.]
			Comments: Not applicable at this time.
$\boxtimes$			A permittee's use of a general permit is limited to five years. No later than 30 days prior to the fifth anniversary of the filing of intent to use the general permit, the owner or operator shall submit a new notice of intent which shall contain all current information regarding the facility or emissions unit. Eligibility to use the general permit is not transferable and does not follow a change in ownership of the facility or emissions unit. Prior to any sale, other change of ownership, or permanent shutdown of the facility, the owner or operator is encouraged to notify the Department of the pending action. The owner shall remain liable for corrective actions that may be required as a result of any violations occurring in the time after the sale or legal transfer of the facility or emissions unit, but before a new owner is entitled to use an air general permit.  [General Conditions - 62-210.300(4)(e)1., F.A.C.]
			Comments: The permit expires on 1/30/10. A new notification form is required to be submitted no later than 12/31/09.
			D. Other:

Pollution Prevention Activities Pollution Prevention Activities  ▶ P2 Handouts Provided: ☐ P2 Brochure; ☐ P2 Manual; ☐ P2 Checklist
➤ Have any emissions reductions occurred
☐ Chemical Substitution; ☐ Equipment Changes; ☐ Process Changes
☐ Chemical/Material Reuse; ☐ On-site Recycling; ☐ Other:
Comments:
Closing Conference
Other Comments: The U cart and mixer operation are connected to baghouse separate from the silo storage baghouse. The
fifteen minutes visible emission test was performed, no emission observed as personnel, emptied cement bags into mixer. I
informed Mr. Kennedy, that it appears the emission unit is in compliance.
