COMMENTS: The compliance test was originally scheduled for 1/10/08 at 10:00 AM. The consultant did not show up. Arlington Environmental Services called Jodi Dittell and asked if there was anyone available on 1/11/08 at 2:00 PM that could attend the compliance test. Ilka Bundy was available for the test. Bill and Kaye Arlington were present for the test. No objectionable odors were detected. No uncontrolled emissions were observed. The facility does not use plastic bags or plastic containers for the cremation process. Only cardboard containers, wood caskets, and particle board containers are used in the cremation process. CO and PM compliance demonstration was determined by submitting a test report for an identical crematory unit that was tested on 4/23/03. CO and PM emissions were within acceptable limits. The observed opacity for both emission units was zero percent. EU001 had a new digital operating panel installed within the past year. An oxygen sensor was added in this unit to read the oxygen level and the combustion level. These additions do not effect the process, therefore, a new application is not required. Operator certifications are no longer required, per the new Rule.
