**COMMENTS:** Inspector Omar Horta met with Mr. Liam Smith and Stephen Boelzner, Baldwin-Fairchild Funeral Homes and Josh Myers, VE reader Southern Environmental Science, on 30 May 2014 to audit annual compliance visible emission test. In addition to audit the VE, the inspector performed a records review of the facility. The facility has two emission units, each with a monitoring system to record temperatures. Both of the machines were operating with a temperature of over 1,600 °F before and during the cremation. The weight and gender for the cremation was a male ~122lb and female ~120lb in EU001 and EU002 respectively. For a visible check of the flame characteristic, the operator must open the door and check if the flame needs any adjustment. Observed opacity was zero percent on both units. The facility keeps records of visual emission log, preventive maintenance log, work performed/calibration work logs and temperature charts that show temperature for secondary chamber to be over 1,600°F on both emission units. No objectionable odors were present at the time of the inspection.
