COMMENTS: The original VE Test was scheduled for Tuesday, February 27, 2007 which was cancelled due to baghouse problems and re-scheduled for today Thursday, March 1, 2007. They are building a new plant on the same site, they have 2 silos with new baghouses, they also are building 3 storage silos and plan to pave the roads. Currently they do not water the roads or materials, the roads are mostly dirt, they were very dried and when the wind blows, clouds of dust from the roads were leaving the property, the road to get to the facility was very dried also, and trucks in/out left behind clouds of dust. I mentioned to Steve Malloch, Plant Manager and Abigail Diaz, Environmental Engineer, that according to the permit they shall take reasonable precautions to control unconfined emissions from truck loading and unloading, roads, parking areas, stock piles and yards. He replied that they will do whatever it takes to be in compliance. No objectionable odors noticed.

No batching occurred during silo's baghouse VE test.

Observed Opacity = 0%

26.82 tons cement/~ 60 min x 60 min/1hr = 26.82 TPH loading rate > 25.0 TPH
