| PART I: INSPECTION  IN COMPLIANCE  | COMPLIANCE STATUS (ch  | _   | SNIFICANT Non-COMPLIANCE  |
| PART II: FACILITY C  | LASSIFICATION - Rule 62-<br>only one box in A)                               | -213.300 FAC  |   |
| transfer only, both types, x - (constructed by a constructed by a construc | ly, x < 140 gal/yr<br>x < 200 gal/yr<br>< 140 gal/yr<br>pefore 12/9/91)      | transfer only, both types, x (constructed of types).  4. New large ar dry-to-dry on transfer only, both types, 14 | lly, x < 140 gal/yr<br>x < 200 gal/yr<br>< 140 gal/yr<br>on or after 12/9/91) |
|  | volume of all perchloroethylene was 90.00 gallons.                           | (perc) purchases mad  | e in each of the previous 12 months by this dry                               |

| PART III: GENERAL CONTROL REQUIREMENTS – Rule 62-213.300 FAC   |             |         | check 🗹             | only one question) |  |  |
|--|-------------|---------|---------------------|--------------------|--|--|
| 1. Is all perc, and wastes containing perc, in tightly sealed & impervious containers?   | $\boxtimes$ | Yes     | ☐ No                | N/A                |  |  |
| 2. Are all perc. containers leak free ?  | $\boxtimes$ | Yes     | ☐ No                | N/A                |  |  |
| 3. Are all machine doors kept closed and secured except during loading/unloading?  |             | Yes     | ☐ No                |                    |  |  |
| 4. Are cartridge filters d rained in their housing or in sealed containers for at least 24 hours prior to disposal?  | $\boxtimes$ | Yes     | ☐ No                | □ N/A              |  |  |
| 5. Has each dry cleaning system installed after December 21, 2005 at an area source, routed the air-PCE gas-vapor stream contained within each dry cleaning machine through a refrigerated condenser and passed the air-PCE gas-vapor stream from inside the dry cleaning machine drum through a non-vented carbon adsorber or equivalent control device immediately before the door of the dry cleaning machine is opened? The carbon adsorber must be desorbed in accordance with manufacturer's instructions. |             | Yes     | □ No                | ⊠ N/A              |  |  |
| 6. Is solvent-to-carbon ratios and steam pressure for carbon adsorber beds maintain according to the manufacturer's specifications?  |             | Yes     | ☐ No                | N/A                |  |  |
|  |             |         |                     |                    |  |  |
| PART IV: PROCESS VENT CONTROLS – Rule 62-213.300 FAC (Refer to Part II-A.14. Classification: page 1 of 4, this form)  1. If the f acility classification is an existing small area source, no controls are required. I   | Procee      | ed to P | Part V.             |                    |  |  |
| 2. If the facility classification is a <u>new small area source</u> , the machine should be equipped with a refrigerated condenser. <b>Complete section A. below.</b>  |             |         |                     |                    |  |  |
| 3. If the fa cility classification is an <u>existing large area source</u> , the machine should be equ refrigerated condenser or a carbon adsorber. Complete both sections A and B below. <i>must have been installed prior to September 22, 1993</i>  |             |         |                     |                    |  |  |
| 4. If the facility classification is a <u>new large area source</u> , the machine should be equipped condenser. Complete both sections A and B below.  | with        | a refri | gerated             |                    |  |  |
| A. Has the responsible official of all <u>existing large area &amp; new sources</u> :  |             |         | check 🗹 ox for each | -                  |  |  |
| 1. Equipped all machines with the appropriate vent controls?   | . 🖂         | Yes     | ☐ No                |                    |  |  |
| 2. Equipped dry-to-dry machines with a closed-loop vapor venting system?   | $\boxtimes$ | Yes     | ☐ No                | N/A                |  |  |
| 3. Equipped the condenser with a diverter valve so airflow will be directed away from the condenser upon opening the door?   | $\boxtimes$ | Yes     | ☐ No                | □ N/A              |  |  |
| 4. Measured and recorded the temperature of the outlet exhaust stream of a refrigerated condenser on a weekly basis?   | $\boxtimes$ | Yes     | ☐ No                | □ N/A              |  |  |
| 5. Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the condenser exceeded 45° F?  |             | Yes     | ☐ No                | □ N/A              |  |  |
| 6. Conducted all temperature monitoring after an appropriate cool-down period and after verifying that the coolant had been completely charged?  |             | Yes     | ☐ No                |                    |  |  |

| PART IV: PROCESS VENT CONTROLS – Rule 62-213.300 FAC (continued)   |   |  |                 |  |         |                            |
|--|---|--|-----------------|--|---------|----------------------------|
|  |   |  |                 |  |         |                            |
| B. For all existing large or new large area sources:  1. Is the exhaust temperature on the outlet side of the condenser located on dry-to-dry,   |   |  |                 |  |         |                            |
| reclaimer, and dryer machines measured and recorded on a weekly basis?   |   | Yes                                    |                 | No   |         |                            |
| 2. Is the weeker exhaus t temperature at the condensor inlet and outlet measured   |   |  |                 |  |         |                            |
| 2. Is the washer exhaus t temperature at the condenser inlet and outlet measured and recorded weekly?  |   | Yes                                    | П               | No   | П       | N/A                        |
| a) Is the temperature differential equal to, or greater than 20° F?  |   | Yes                                    |                 | No   |         | N/A                        |
|  |   | 105                                    |                 | 110  |         | 1 1/1 1                    |
| 3. Is the perc concentration in the exhaust stream inlet and outlet measured weekly  |   |  |                 |  |         |                            |
| at the end of the final drying cycle while the machine is venting to the adsorber, if machines are equipped exclusively with a carbon adsorber?  |   | Yes                                    |                 | No   | П       | N/A                        |
|  |   |  |                 |  | _       |                            |
| a) Is the perc concentration equal to, or less than 100 ppm?   |   | Yes                                    |                 | No   |         | N/A                        |
| 4. Is the sampling port on the carbon adsorber exhaust for measuring   |   |  |                 |  |         |                            |
| perc concentrations at least 8 duct diameters downstream of any bend,  |   |  |                 |  |         |                            |
| contraction, or expansion; is at least 2 duct diameters upstream from any bend,  |   | Vac                                    |                 | No   |         | NT/A                       |
| contraction, or expansion; and downstream from no other inlet?   | Ш | Yes                                    | Ш               | No   | Ш       | N/A                        |
| 5. Are transfer machines equipped (dryers, reclaimers, and washers) with individual  |   |  |                 |  |         |                            |
| 3. The transfer machines equipped (dryers, rectamers, and washers) with marviadar  |   |  |                 | NT.  |         | N/A                        |
| condenser coils?   |   | Yes                                    |                 | No   | Ш       | 1 <b>1</b> ///             |
| condenser coils?   |   | Yes<br>Yes                             | _               | No   |         | N/A                        |
