COMMENTS: Facility is under new ownership and must submit a new Air General Permit for its operation. During the joint inspection with Hazardous Waste personnel, very strong PERC odors were noted in the front lobby of the facility while the dry cleaning machine was in operation. A check inside of the clothes in the drum after the unit had completed its cycle, noted very strong PERC odors emanating from the clothes. The new owner, Kleber Olivero, stated that a new blower unit on the back of the machine had recently been installed, but that he had no indication from the repairman that there may be anything wrong with the machine. The Malfunction part of the facility's S/S/M Plan needs to be expanded upon and a narrative describing procedures for handling an actual spill at the facility needs to be generated and posted where all workers can read and follow. A example for the malfunction part of the S/S/M Plan was posted on the machine but the example was not specific for the facility itself, just an example of how to possibly address a spill at a dry cleaning facility.
