

## PERCHLOROETHYLENE DRY CLEANERS

## COMPLIANCE INSPECTION CHECKLIST

| INSPECTION TYPE: ANNUAL (INS1, INS2) RE-INSPECTION (FUI)   | COMPLAINT/D<br>ARMS COMPLA   | ISCOVERY (CI)  |
|--|--|--|
| AIRS ID#: 0310375 DATE: <u>09/18/2013</u>  | ARRIVE: <u>1430</u>  | DEPART:  |
| FACILITY NAME: DENIM & LACE CLEANERS   |  |  |
| <b>FACILITY LOCATION:</b> 3533 UNIVERSITY BLV  | VD N   |  |
| JACKSONVILLE 3227  | 7-2422   |  |
| OWNER/AUTHORIZED REPRESENTATIVE: BASI<br>Email:<br>CONTACT NAME: BASIL KASSIRA<br>Email:<br>ENTITLEMENT PERIOD: 9/13/2009 / 9/13/2014<br>(effective date) (end date)   | IL KASSIRA   | PHONE: (904)744-6944<br>Mobile:<br>PHONE: (904)744-6944<br>Mobile:           |
| PART I: INSPECTION COMPLIANCE STATUS (che  |  | )<br>NIFICANT Non-COMPLIANCE   |
| PART II: FACILITY CLASSIFICATION - Rule 62-2   | 213.300 FAC  |  |
| <ul> <li>A. 1. Existing small area source dry-to-dry only, x &lt; 140 gal/yr transfer only, x &lt; 200 gal/yr both types, x &lt; 140 gal/yr (constructed before 12/9/91)</li> <li>3. Existing large area source dry-to-dry only, 140 ≤ x ≤ 2,100 gal/yr transfer only, 200 ≤ x ≤ 1,800 gal/yr both types, 140 ≤ x ≤ 1,800 gal/yr (constructed before 12/9/91)</li> <li>5. Ineligible for General Permit d rop store/out of business/petroleum / facility exceeds above limits</li> </ul> | transfer only, both types, x (constructed of the constructed of the co | ly, x < 140 gal/yr<br>x < 200 gal/yr<br>< 140 gal/yr<br>on or after 12/9/91) |
| <b>B</b> . The sum of the volume of all perchloroethylene (goldening facility was 19 gallons.  | perc) purchases made   | e in each of the previous 12 months by this dry                              |

| PA        | ART III: GENERAL CONTROL REQUIREMENTS – Rule 62-213.300 FAC   |             |          | check<br>x for e |    | only o      |     |
|-----------|---|-------------|----------|------------------|----|-------------|-----|
| 1.        | Is all perc, and wastes containing perc, in tightly sealed & impervious containers?   | $\boxtimes$ | Yes      |                  | No | _           | N/A |
|           | Are all perc. containers leak free?   |             | Yes      |                  | No |             | N/A |
|           | Are all machine doors kept closed and secured except during loading/unloading?  |             | Yes      |                  | No |             |     |
|           | Are cartridge filters d rained in their housing or in sealed containers for at least 24 hours prior to disposal?  | $\boxtimes$ | Yes      |                  | No |             | N/A |
| 5.        | Has each dry cleaning system installed after December 21, 2005 at an area source, routed the air-PCE gas-vapor stream contained within each dry cleaning machine through a refrigerated condenser and passed the air-PCE gas-vapor stream from inside the dry cleaning machine drum through a non-vented carbon adsorber or equivalent control device immediately before the door of the dry cleaning machine is opened? The carbon adsorber must be desorbed in accordance with manufacturer's instructions. |             | Yes      |                  | No | $\boxtimes$ | N/A |
| 6.        | Is solvent-to-carbon ratios and steam pressure for carbon adsorber beds maintain according to the manufacturer's specifications?  | $\boxtimes$ | Yes      |                  | No |             | N/A |
|           |   |             |          |                  |    |             |     |
|           | ART IV: <u>PROCESS VENT CONTROLS</u> – Rule 62-213.300 FAC efer to Part II-A.14. Classification: page <u>1</u> of <u>4</u> , this form)   |             |          |                  |    |             |     |
|           | 1. If the f acility classification is an <b>existing small area source</b> , no controls are required. <b>P</b>   | rocee       | ed to P  | art V            | •  |             |     |
|           | 2. If the facility classification is a <u>new small area source</u> , the machine should be equipped condenser. <b>Complete section A. below.</b>   | with a      | a refrig | gerated          | l  |             |     |
|           | 3. If the fa cility classification is an <b>existing large area source</b> , the machine should be equipped with either a refrigerated condenser or a carbon adsorber. <b>Complete both sections A and B below.</b> Carbon adsorber must have been installed prior to September 22, 1993  |             |          |                  |    |             |     |
|           | 4. If the facility classification is a <u>new large area source</u> , the machine should be equipped condenser. Complete both sections A and B below.   | with        | a refriş | gerateo          | d  |             |     |
| <b>A.</b> | Has the responsible official of all <u>existing large area &amp; new sources</u> :  |             |          |                  |    | only o      |     |
| 1.        | Equipped all machines with the appropriate vent controls?   |             | Yes      |                  | No |             |     |
| 2.        | Equipped dry-to-dry machines with a closed-loop vapor venting system?   |             | Yes      |                  | No |             | N/A |
| 3.        | Equipped the condenser with a diverter valve so airflow will be directed away from the condenser upon opening the door?   |             | Yes      |                  | No |             | N/A |
| 4.        | Measured and recorded the temperature of the outlet exhaust stream of a refrigerated condenser on a weekly basis?   |             | Yes      |                  | No |             | N/A |
| 5.        | Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the condenser exceeded 45° F?  |             | Yes      |                  | No |             | N/A |
| 6.        | Conducted all temperature monitoring after an appropriate cool-down period and after verifying that the coolant had been completely charged?  |             | Yes      |                  | No |             |     |

| PART IV: PROCE   | SS VENT CONTROLS – Rule 62-213.300 FAC (continued)  |             |  |  |  |                  |                               |
|--|---|-------------|--|--|--|------------------|-------------------------------|
| <b>B. For all existing l</b> 1. Is the exhaust te  | arge or new large area sources: mperature on the outlet side of the condenser located on dry-to-dry, yer machines measured and recorded on a weekly basis?  |             | Yes                                    | <u> </u>   | No   |                  |                               |
| and recorded wee   | aus t temperature at the condenser inlet and outlet measured kly?   |             | Yes                                    | <u> </u>   | No   |                  | N/A                           |
| a) Is the tempera  | ture differential equal to, or greater than 20° F?  |             | Yes                                    | 1  | No   |                  | N/A                           |
| at the end of the f  | ntration in the exhaust stream inlet and outlet measured weekly inal drying cycle while the machine is venting to the adsorber, quipped exclusively with a carbon adsorber?                                   |             | Yes                                    | <u> </u>   | No   |                  | N/A                           |
| a) Is the perc cor   | centration equal to, or less than 100 ppm?  |             | Yes                                    | 1  | No   |                  | N/A                           |
| 4. Is the sampling perc concentration contraction, or ex   | ort on the carbon adsorber exhaust for measuring at least 8 duct diameters downstream of any bend, pansion; is at least 2 duct diameters upstream from any bend, pansion; and downstream from no other inlet? |             | Yes                                    | I  | No   |                  | N/A                           |
| 5. Are transfer mach condenser coils?  | nines equipped (dryers, reclaimers, and washers) with individual  |             | Yes                                    | I  | No   |                  | N/A                           |
| <u> </u>   |   |             |  |  |  |                  | NT/A                          |
| 6. Is airflow routed   | to the carbon adsorber (if used) at all times?  |             | Yes                                    | l  | No   | Ш                | N/A                           |
| 6. Is airflow routed   | to the carbon adsorber (if used) at all times?  |             | Yes                                    |  | No   |                  | N/A                           |
| 6. Is airflow routed   | to the carbon adsorber (if used) at all times?  |             | Yes                                    |  | No<br>   |                  | N/A                           |
|  | to the carbon adsorber (if used) at all times?  DKEEPING REQUIREMENTS – Rule 62-213.300(3) FAC  |             | (                                      | (check E   | <b>V</b> (   | only o           | ne                            |

| PA | ART VI: <u>LEAK DETECTION AND REPAIRS</u> – Rule 62-213.300 FAC   |                                 | (check 🗹  | only one  |
|----|---|---------------------------------|---|---|
| 1. | What type of leak detection equipment is used to detect leaks?  | b                               | ox for each   | question)   |
|    | ☐ Halogenated hydrocarbon detector ☐ PCE gas analyzer ☐ None used   |                                 |   |   |
| 2. | Is the halogenated hydrocarbon detector or PCE gas analyzer operated according to   |                                 |   |   |
|    | the manufacturer's instructions (manual was available and RO could demonstrate  |                                 |   |   |
|    | procedure) ?  | Yes                             | ☐ No  |   |
| 3. | For major sources is the halogenated hydrocarbon detector or PCE gas analyzer   |                                 |   |   |
|    | operated according to EPA Method 21 ?   | Yes                             | ☐ No  | N/A   |
| 4. | Is the vapor leak inspection conducted by placing the probe inlet at the surface of   |                                 |   |   |
|    | each component interface where leakage could occur and moving it slowly along   |                                 |   |   |
|    | the interface periphery? $\boxtimes$  | Yes                             | ☐ No  |   |
| 5. | Is the PCE gas analyzer a flame ionization detector, photo ionization detector, or  |                                 |   |   |
|    | infrared analyzer capable of detecting vapor concentrations of PCE of 25 parts per  |                                 |   |   |
|    | million by volume (based on documented specifications) ?  | Yes                             | ☐ No  | N/A   |
| 6. | Is the <u>halogenated hydrocarbon detector</u> capable of detecting vapor concentrations  |                                 |   |   |
|    | of PCE of 25 parts per million by volume (based on documented specifications) and   |                                 |   |   |
|    | indicating a concentration of 25 parts per million by volume or greater by emitting   |                                 |   |   |
|    | an audible or visual signal that varies as the concentration changes? 🖂   | Yes                             | ☐ No  | N/A   |
| 7. | Are the following dry cleaning system components inspected weekly for perceptible leaks (sight, sm  | nell or                         | touch) while  | le the  |
|    | system is in operation (§63.322(k))?  |                                 |   |   |
|    | (Inspection with a halogenated hydrocarbon detector or PCE gas analyzer also fulfills the requirement for insp  | pection                         | of perceptib  | le leaks)   |
|    | b) Door gaskets and seating  Yes  No N/A h) Stills Y  |                                 | <ul><li> No</li><li> No</li><li> No</li><li> No</li><li> No</li><li> No</li><li> No</li></ul> | <ul><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li></ul> |
| 8. | Are the following dry cleaning system components inspected $\underline{monthly}$ for $\underline{vapor\ leaks}$ using a halogen $\underline{monthly}$ for $\underline{monthly}$ f | enated                          | hydrocarbo  | on detector   |
|    | or PCE gas analyzer while the system is in operation? (Any inspection conducted according to this parag   | raph si                         | hall satisfy th   | ne  |
|    | requirements to conduct an inspection for perceptible leaks under §63.322(k) or (l))  |                                 |   |   |
|    | b) Door gaskets and seating   Yes   No   N/A   N/A   N/A   Stills   Yes   Yes   No   N/A   N/A   N/A   N/A   N/A   N/A   Yes  | Yes<br>Yes<br>Yes<br>Yes<br>Yes | <ul><li>□ No</li><li>□ No</li><li>□ No</li><li>□ No</li><li>□ No</li></ul>                    | <ul><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li></ul> |
