PERCHLOROETHYLENE DRY CLEANERS

COMPLIANCE INSPECTION CHECKLIST

INSPECTION TYPE: ANNUAL (INS1, INS2) RE-INSPECTION (FUI)	COMPLAINT/DISCOVERY (CI)
AIRS ID#: 1030318 DATE: <u>10/18/2007</u>	ARRIVE: <u>10:45AM</u> DEPART: <u>11:30AM</u>
FACILITY NAME: FASHION CLEANERS	
FACILITY LOCATION: 1152 Court St	
CLEARWATER 33756	5-5705
RESPONSIBLE OFFICIAL: MICHAEL SONG	PHONE: (727)461-1137
CONTACT NAME: Micheal Song	PHONE: (
REMITTANCE YEAR: 2006 ENTITL	EMENT PERIOD: 1/4/2007 / 1/4/2012 (effective date) (end date)
PART I: INSPECTION COMPLIANCE STATUS (ch	
PART II: FACILITY CLASSIFICATION - Rule 62-2 (check 🗹 only one box in A)	13.300 FAC
A. 1. Existing small area source dry-to-dry only, $x < 140$ gal/yr transfer only, $x < 200$ gal/yr both types, $x < 140$ gal/yr (constructed before 12/9/91)	2. New small area source dry-to-dry only, $x < 140$ gal/yr transfer only, $x < 200$ gal/yr both types, $x < 140$ gal/yr (constructed on or after 12/9/91)
3. Existing large area source dry-to-dry only, $140 \le x \le 2,100$ gal/yr transfer only, $200 \le x \le 1,800$ gal/yr both types, $140 \le x \le 1,800$ gal/yr (constructed before 12/9/91)	4. New large area source dry-to-dry only, $140 \le x \le 2,100$ gal/yr transfer only, $200 \le x \le 1,800$ gal/yr both types, $140 \le x \le 1,800$ gal/yr (constructed on or after 12/9/91)
5. Ineligible for General Permit drop store/out of business/petroleum facility exceeds above limits	
B . The total quantity of perchloroethylene (perc) put cleaning facility was 29.5 gallons.	rchased within the preceding 12 months by this dry

PART III: <u>GENERAL CONTROL REQUIREMENTS</u> – Rule 62-213.300 FAC	(check 🗹 only one box
Does the responsible official of the dry cleaning facility:	for each question)
1. Store perc, and wastes containing perc, in tightly sealed & impervious containers?	Yes No N/A
2. Examine the containers for leakage?	Yes No N/A
3. Close and secure machine doors except during loading/unloading?	Yes No
4. Drain cartridge filters in their housing or in sealed containers for at least 24 hours prior to disposal?	Yes No N/A
5. Maintain solvent-to-carbon ratios and steam pressure for carbon adsorber beds according to the manufacturer's specifications?	∐Yes □ No ⊠ N/A

PART IV:PROCESSVENTCONTROLS– Rule 62-213.300 FAC(Refer to Part II-A.14. Classification: page 1 of 4, this form)				
1. If the facility classification is a Existing small area source , no controls are required. Proceed to Part V.				
	2. If the facility classification is a <u>New small area source</u> , the machine should be equipped with a refrigerated condenser. Complete section A. below.			
3. If the facility classification is a Existing large area source , the machine should be equipped with either a refrigerated condenser or a carbon adsorber. Complete both sections A and B below. <i>Carbon adsorber must have been installed prior to September 22, 1993</i>				
	4. If the facility classification is a <u>New large area source</u> , the machine should be equip condenser. Complete both sections A and B below.	luipped v	vith a ref	rigerated
А.	Has the responsible official of all <u>existing large area & new sources</u> :		☑ only each ques	one box for stion)
1.	Equipped all machines with the appropriate vent controls?	⊠Yes	No	
2.	Equipped dry-to-dry machines with a closed-loop vapor venting system?	⊠Yes	No	□N/A
3.	Equipped the condenser with a diverter valve so airflow will be directed away from the condenser upon opening the door?	⊠Yes	No	□N/A
4.	Measured and recorded the temperature of the outlet exhaust stream of a refrigerated condenser on a weekly basis?	⊠Yes	No	
5.	Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the condenser exceeded 45° F?	Yes	No	⊠N/A
6.	Conducted all temperature monitoring after an appropriate cool-down period and after verifying that the coolant had been completely charged?	⊠Yes	No	

PA	ART IV: <u>PROCESS VENT CONTROLS</u> – Rule 62-213.300 FAC (continued)			
B.	Does the responsible official of an existing large or new large area source also:	(check 🗹 only o each ques		
1.	Measure and record the exhaust temperature on the outlet side of the condenser located on dry-to-dry, reclaimer, and dryer machines on a weekly basis?	Yes I	No	
2.	Measure and record the washer exhaust temperature at the condenser inlet and outlet weekly?	- Yes - Yes - Yes - Yes Yes	No 🖾 N/A No 🖾 N/A	
3.	Measure and record the perc concentration in the exhaust stream weekly at the end of the final drying cycle while the machine is venting to the adsorber, if machines are equipped exclusively with a carbon adsorber?	Yes	No 🔀 N/A	
	a) Is the perc concentration equal to, or less than 100 ppm?	Yes	No 🕅 N/A	
4.	Assure that the sampling port on the carbon adsorber exhaust for measuring perc concentrations is at least 8 duct diameters downstream of any bend, contraction, or expansion; is at least 2 duct diameters upstream from any bend, contraction, or expansion; and downstream from no other inlet?	Yes	No 🖂 N/A	
5.	Equip transfer machines (dryers, reclaimers, and washers) with individual condenser coils?	- Yes	No 🛛 N/A	
6.	Route airflow to the carbon adsorber (if used) at all times?	Yes	No 🕅 N/A	

PART V: <u>RECORDKEEPING REQUIREMENTS</u> – Rule 62-213.300(3) FAC	(shash 🗹 anha ang han fan
Does the responsible official:	(check ☑ only one box for each question)
1. Maintain receipts for perc purchased?	- 🛛 Yes 🗌 No
2. Maintain rolling monthly total of yearly perc consumption?	🛛 Yes 🗌 No
3. Maintain leak detection inspection and repair reports for the following:	
a) documentation of leaks repaired w/in 24 hrs? or;	- Yes No N/A
b) documentation of parts ordered to repair leak and leak repaired w/in 2 days and parts installed w/in 5 days of receipt?	□ Yes □ No □ N/A
4. Maintain calibration data? (for applicable direct reading instruments)	Yes No N/A
5. Maintain exhaust duct monitoring data on perc concentrations?	Yes No N/A
6. Maintain a startup/shutdown/malfunction plan?	Yes No
7. Maintain deviation reports?	- Yes No N/A
a) Problem corrected?	- 🗌 Yes 🗌 No 🖾 N/A
8. Maintain a compliance plan, if applicable?	- Yes No N/A

PART VI: <u>LEAK DETECTION AND REPAIRS</u> – Rule 62-213.300 FAC

1. Does the responsible official conduct a weekly (for small sources, bi-weekly) leak

(check ☑ only one box for each question)

detection and repair inspection?	
2. Does the facility maintain a leak log? Xes I No	
 3. Does the responsible official check the following areas for leaks? a) Hose connections, fittings, couplings, and valves	
4. Which method(s) of detection (is/are) used by the responsible official?	
 a) Visual examination (condensed solvent on exterior surfaces) a) b) Physical detection (airflow felt through gaskets) b) c) Odor (noticeable perc odor) c) d) Use of direct-reading instrumentation (FID/PID/calorimetric tubes) d) e) Halogen leak detector e) 	
 **If using direct-reading instrumentation, is the equipment:	
Shea Jackson 10/18/2007	
Inspector's Name (Please Print) Date of Inspection	
2008	

Inspector's Signature

Approximate Date of Next Inspection

COMMENTS: •During this inspection, I met with the facility responsible official, Mr. Song. I observed the Union L8602000 dryer. The Fluomatic- BT37 is still not in use. The perc level in this machine's base reservoir is now empty. This older unit had not been used since October 2005. Mr. Song had considered replacing this machine, with a new hydrocarbon dryer. He stated that the removal of the old machine is expensive, and he was going to leave it on site.

• I reviewed the 2006 and 2007 calendar records. Mr. Song is recording temperatures and leak check observations and the perchloroethylene usage of the Union 2002 dry cleaning machine.

• The monthly total entries for the entire 2006 year were each 0.7 gallons. Mr. Song had purchased perc for the union machine in August 2007; the consecutive total was 29.06 gal. The consecutive total is 13.97 gallons at this time. Mr. Song had been dry-cleaning, without the purchase of perc because he had been siphoning the Perc from the Fluomatic to the Union. He stated he had does not account for the amount added to the Union 2000, because the Perc was already accounted for when purchased for the Fluomatic BT 37.

• The record temperature readings for the 2007 year, for Mr. Song's observations of the cool down cycle the temperatures were ranging from $32^{\circ}F - 38^{\circ}F$.

• I observed the Union 2000 dry cleaning during the cool down cycle. The temperature was registering at 32°F, on the temperature readout behind machine. (See photo)

• I used the Halogen detector to check the equipment for leaks. There was no indication of leaks. I did not detect any perchloroethylene odors during the operation and the observations of area behind the dryer.

• The hazardous waste receptacle was in place on secondary containment cart. The additional waste receptacles were observed as in another secondary containment area in the boiler room. (See photos)

• Mr. Song stated he had purchased a new boiler. Fulton 30 Hp

• I advised Mr. Song of the rule changes and the required the use of Halogen Detector for looking for Perc Leaks, and he needs to obtain meter by July 27, 2008. I gave him rule and separator water memo and P2 pamphlet and brochures information. I advised him a meter had to be in use for August 2008. I advised Mr. Song and made note on summary log regarding need to

purchase halogen detector. I advised after the required date if did not obtain a meter would be a violation which could result in penalties.

- He signed the annual certification. •
- This facility is considered to be in compliance at this time.
