exceed limits $\Box Y \ \boxtimes N$				

#### Is the responsible official of the dry cleaning facility: (Check appropriate boxes) 1. Storing perchloroethylene in tightly sealed and impervious containers? $\bowtie Y$ $\square$ N $\prod NA$ 2. Examining the containers for leakage? $\boxtimes Y$ $\square$ NA $\square$ N 3. Closing and securing machine doors except during loading/unloading? $\boxtimes Y$ $\square$ N 4. Draining cartridge filters in their housing or in sealed containers for at $\bowtie Y$ least 24 hours prior to disposal? $\prod N$ $\square$ NA 5. Maintaining solvent-to-carbon ratios and steam pressure for carbon $\boxtimes Y$ adsorber beds according to the manufacturer's specifications? $\square$ N $\square$ NA PART IV: PROCESS VENT CONTROLS In Part II-A: If classification (1) has been checked, no controls are required. Proceed to Part V. If classification (2) has been checked, the machine should be equipped with a refrigerated condenser (complete A below) If classification (3) has been checked, the machine should be equipped with either a refrigerated condenser or a carbon adsorber (complete A and B below). A Carbon adsorber must have been installed prior to September 22, 1993. If classification (4) has been checked, machine should be equipped with a refrigerated condenser (complete A and B below.) A. Has the responsible official of all new sources and existing large area sources: (check appropriate boxes) $\bowtie Y$ $\square N$ $\prod NA$ 1. Equipped all machines with the appropriate vent controls? $\bowtie Y$ $\square$ N $\square$ NA 2. Equipped dry-to-dry machines with a closed-loop vapor venting system? 3. Equipped the condenser with a diverter valve so airflow will be directed away from the $\bowtie Y$ $\square$ N $\square$ NA condenser upon opening the door? 4. Measured and recorded the temperature of the outlet exhaust stream of a refrigerated $\bowtie Y$ $\prod N$ $\square$ NA condenser on a weekly basis? 5. Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the $\bowtie Y$ $\prod N$ $\prod NA$ condenser exceeded 45° F?

 $\bowtie Y$ 

 $\prod N$ 

 $\prod NA$ 

PART III: GENERAL CONTROL REQUIREMENTS

6. Conducted all temperature monitoring after an appropriate cool down period and after

verifying the coolant had been completely charged?

В.	Has the responsible official of an existing large or new large area source also:	
1.	Measured and recorded the exhaust temperature on the outlet side of the condenser located on dry-to-dry, reclaimer, and dryer machines on a weekly basis?	⊠Y □N
2.	Measured and recorded the washer exhaust temerate at the condenser inlet and outlet	□Y □N □NA
	weekly?  Is the temperature differential equal to on F?	□Y □N □NA
3.	Measured and recorded the concentration final drying cycle while the with a carbon and concentration with a carbon and concentration or less that the end of the ppm?  Is the per concentration received at the end of the ppm?	□Y □N □NA □Y □N □NA
4.	Assured that the sconcentrations is at duct diameters upstream from any bend, contraction, or expansion; is at least.  and downstream from number of the sconding of the scond	□Y □N □NA
5.	Equipped transfer machines (dryers, reclaimers, and washers) with individual condenser coils?	□Y □N □NA
6.	Routed airflow to the carbon adsorber (if used) at all times?	□Y □N □NA

## **System Inspection and Leak Detection**

Are the following dry cleaning system components inspected weekly for perceptible leaks (sight, smell or touch) while the system is in operation (§63.322(k))? (Inspection with a halogenated hydrocarbon detector or PCE gas analyzer also fulfills the requirement for inspection of perceptible leaks.) $\boxtimes Y  \Box N  \Box NA$
Are the following dry cleaning system components inspected monthly for vapor leaks using a halogenated hydrocarbon detector or PCE gas analyzer while the system is in operation? (Any inspection conducted according to this paragraph shall satisfy the requirements to conduct an inspection for perceptible leaks under $\S63.322(k)$ or (I). $\square Y$ $\square N$
(1) Hose and pipe connections, fittings, couplings, and valves;
(2) Door gaskets and seatings;
(3) Filter gaskets and seatings;
(4) Pumps;
(5) Solvent tanks and containers;
(6) Water separators;
(7) Muck cookers;
(8) Stills;
(9) Exhaust dampers;
(10) Diverter valves; and
(11) All Filter housings
Is the halogenated hydrocarbon detector or PCE gas analyzer operated according to the manufacturer's instructions? $\boxtimes Y  \Box NA$
Is the vapor leak inspection conducted by placing the probe inlet at the surface of each component interface where leakage could occur and moving it slowly along the interface periphery? $\boxtimes Y  \Box N  \Box NA$
Is the PCE gas analyzer a flame ionization detector, photo ionization detector, or infrared analyzer capable of detecting vapor concentrations of PCE of 25 parts per million by volume? $\Box Y \Box N \Box NA$
Is the halogenated hydrocarbon detector capable of detecting vapor concentrations of PCE of 25 parts per million by volume and indicating a concentration of 25 parts per million by volume or greater by emitting an audible or visual signal that varies as the concentration changes? $\square Y \square N \square NA$

#### ADDITIONAL SITE INFORMATION

**Facility Name:** Fashion Cleaners & Shirt Laundry, Inc.

**ARMS** #: 103 0318

#### **Inspection Comments:**

- I met with the facility responsible official's wife, Mrs. Song, for this inspection.
- I observed the Union L8602000 dryer was not in operation at time of inspection.
- There were no Perc odors detected during the observations of the machine during operations.
- Mr. Song maintains Phoenix vendor's calendar for keeping the temperature and leak observation checks. I reviewed the 2013 and 2014 calendar records they were up to date. (See Photo)
- Mr. Song is recording temperatures, leak check observations and the perchloroethylene usage of the Union 2002 dry cleaning machine.
- Mr. Song's observations of the cool down cycle temperatures readings indicated machine temperatures ranged from 30°F 34°F for the 2013 and 2014 year.
- The highest Perc monthly total was 33.2 gallons for month of August 2013 and January 2014
- The most recent Perc purchase was dated 12/2013 for 15 gallons. (See photos)
- The hazardous waste receptacle was in place on secondary containment receptacle next to the Union dry to dry machine.
- The Fulton 30 HP boiler is located in adjacent room on the north side of the facility.
- Mr. Songs uses a Tif XL 1A Halogen detector to check the equipment for leaks. The detector was located at the rear of the dry to dry machine.
- The second dry to dry machine, Fluomatic- BT37 was permanently shutdown October 2005, due to the condenser leaks. and does not contain perchloroethylene reservoir is empty
- I left copy of the inspection summary.
- The facility appears to be in compliance at this time.
