COMMENTS: This inspection was conducted in the presence of Robin Durden, Manager. At the time of the inspection the facility was operating without Entitlement. A Perchloroethylene Dry Cleaner Air General Permit Notification Form was given to the manager during the inspection. The notification form was received by the Department on April 23, 2009. At time of the inspection the perc machine was not in use due to the boiler being unoperable. I was given conflicting timespans on how long the machine has not been in operation. The manger gave a time span of approxiamtely 1 month, while Mr. Pecoraro (during a telephone conversation) stated the machine has been out of operation since shortly after my last visit on September 15, 2008. Despite the perc machine being out of operation, the front of the machine shows signs of possible leakage. There is no documentation of leak check being conducted. The last entry in the logbook was in September 2008 (just before the inspection conducted on September 15, 2008). Mr. Pecoraro, was infromed that once the perch machine is returned to operation he is to immediately conduct leak checks, keep a log of those leak checks, and make repairs as necessary. A container of separator water is open to the atmosphere. A 15-gallon container of hazardous waste is not in secondary containment. The faciltiy has not registered with the Division of Waste as a Drycleaning Facility. On April 23, 2009 a description of correction actions was received by the Department.
