COMMENTS:

- During the inspection of the facility, I met with Soo Hwan Kim, the responsible official and owner of the dry to dry operations.
- I observed the Spencer Sprint 200 machine. The equipment is in good condition, still looks new, infrequent usage.
- I observed the calendar records for the perchloroethylene usage totals and leak detection observations. The records were up to date as of 12/14/2007. The temperatures recorded ranged between of 41–44F. The facility did not purchase any perc during the 2007 calendar year. The 12 month consecutive total for January 2007 was 45 gallons, and the December 2007 was 19.3 gallons. The perc most recent purchase order was for 19.3 gallons in 9/15/2006. The last Hazardous waste manifest disposal was on 1/8/2007.
- The monitoring and recording of the checks continue to be made on a bi weekly base as required for existing small facilities.
- The dryer and associated equipment was not in operation at this time. The dryer equipment and containers were well maintained and closed.
- There were no perchloroethylene odors detected during the inspection of the facility.
- The perchloroethylene hazardous waste and containers were closed and located in the secondary containment area. (See photo)
- Kim stated they still do not use the dry to dry machine, and typically use detergent for laundry.
- The boiler is a small electric unit, exempt from permitting.
- I gave the inspection summary, a copy of the P2R2 information booklet, Water separator memo
- I also gave the Halogen detector rule guidance, and I informed them that a halogen detector should be purchase prior to the July 27, 2008, or could result in a violation.
- I gave them an information packet for obtaining their calendar record for the 2008 year, since the state is no longer providing a copy.
- This facility is in compliance at this time.
