#### PART III: GENERAL CONTROL REQUIREMENTS Is the responsible official of the dry cleaning facility: (Check appropriate boxes) 1. Storing perchloroethylene in tightly sealed and impervious containers? $\boxtimes Y$ $\prod N$ $\prod NA$ 2. Examining the containers for leakage? $\bowtie Y$ $\prod N$ $\prod NA$ 3. Closing and securing machine doors except during loading/unloading? $\bowtie Y$ $\prod N$ 4. Draining cartridge filters in their housing or in sealed containers for at least 24 hours prior to disposal? $\bowtie Y$ $\prod N$ $\prod NA$ 5. Maintaining solvent-to-carbon ratios and steam pressure for carbon adsorber beds according to the manufacturer's specifications? $\prod N$ $\prod Y$ $\boxtimes$ NA PART IV: PROCESS VENT CONTROLS In Part II-A: If classification (1) has been checked, no controls are required. Proceed to Part V. If classification (2) has been checked, the machine should be equipped with a refrigerated condenser (complete A below) If classification (3) has been checked, the machine should be equipped with either a refrigerated condenser or a carbon adsorber (complete A and B below). A Carbon adsorber must have been installed prior to September 22, 1993. If classification (4) has been checked, machine should be equipped with a refrigerated condenser (complete A and B below.) A. Has the responsible official of all new sources and existing large area sources: (check appropriate boxes) $\prod Y$ $\boxtimes NA$ $\prod N$ 1. Equipped all machines with the appropriate vent controls? $\square Y$ $\square$ N $\bowtie$ NA 2. Equipped dry-to-dry machines with a closed-loop vapor venting system? 3. Equipped the condenser with a diverter valve so airflow will be directed away from the $\prod Y$ $\prod N$ $\bowtie$ NA condenser upon opening the door? 4. Measured and recorded the temperature of the outlet exhaust stream of a refrigerated $\prod Y$ $\prod N$ $\bowtie$ NA condenser on a weekly basis? 5. Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the $\prod Y$ $\square$ N $\bowtie$ NA condenser exceeded 45° F?

 $\square Y$ 

 $\square$  N

 $\bowtie$  NA

6. Conducted all temperature monitoring after an appropriate cool down period and after

verifying the coolant had been completely charged?

B.	Has the responsible official of an existing large or new large area source also:					
1.	Measured and recorded the exhaust temperature on the outlet side of the condenser located on dry-to-dry, reclaimer, and dryer machines on a weekly basis?	⊠Y □N				
2.	Measured and recorded the washer exhaust tem re at the condenser inlet and outlet	□Y □N □NA				
	weekly?  Is the temperature differential equal to or P?	□Y □N □NA				
3.	Measured and recorded the concentration final drying cycle while the we is venting with a carbon and care?  Is the per or less that ppm?	□Y □N □NA □Y □N □NA				
4.	Assured that the sconcentrations is at concentrations is at least and downstream from n on adsorber exhaust for measuring perc. duct dian are downstream of any bend, contraction, or expansion; and downstream from n on the inlet?	□Y □N □NA				
5.	Equipped transfer machines (dryers, reclaimers, and washers) with individual condenser coils?	□Y □N □NA				
6.	Routed airflow to the carbon adsorber (if used) at all times?	□Y □N □NA

<b>H</b> a (C)	heck appropriate boxes)  Maintained receipts for perc purchased?					
Ha (CI 1.	Maintained receipts for perc purchased?  Maintained rolling monthly averages of perc consumption?  Maintained leak detection inspection and repair reports for the following:  a. Documentation of leaks repaired w/in 24 hrs? or;  b. Documentation of parts ordered to repair leak and leak repaired w/in 2 days	□Y □N ⊠NA				
Ha (C) 1. 2. 3.	Maintained receipts for perc purchased?  Maintained rolling monthly averages of perc consumption?  Maintained leak detection inspection and repair reports for the following:  a. Documentation of leaks repaired w/in 24 hrs? or;  b. Documentation of parts ordered to repair leak and leak repaired w/in 2 days and parts installed w/in 5 days of receipt?	□Y □N □NA□Y □N □NA				
Ha (C) 1. 2. 3.	Maintained receipts for perc purchased?  Maintained rolling monthly averages of perc consumption?  Maintained leak detection inspection and repair reports for the following:  a. Documentation of leaks repaired w/in 24 hrs? or;  b. Documentation of parts ordered to repair leak and leak repaired w/in 2 days and parts installed w/in 5 days of receipt?  Maintained calibration data? (direct reading instruments only)	□Y □N ⊠NA □Y □N ⊠NA □Y □N ⊠NA				
Ha (C) 1. 2. 3. 4. 5.	As the responsible official: heck appropriate boxes)  Maintained receipts for perc purchased?  Maintained rolling monthly averages of perc consumption?  Maintained leak detection inspection and repair reports for the following:  a. Documentation of leaks repaired w/in 24 hrs? or;  b. Documentation of parts ordered to repair leak and leak repaired w/in 2 days and parts installed w/in 5 days of receipt?  Maintained calibration data? (direct reading instruments only)  Maintained exhaust duct monitoring data on perc concentrations?	□Y □N ⊠NA □Y □N ⊠NA □Y □N ⊠NA □Y □N ⊠NA				

### PART VI: LEAK DETECTION AND REPAIRS

1.	Does the responsible official conduct weekly leak detection and repair inspection?					□N
2.	Which method of detection does the responsible official use?					$\square N$
	Visual examination (condensed solvent of exterior surfaces)					$\square N$
	Physical detection (airflow felt through gaskets)					
	Odor (noticeable perc odor)					
	Use of direct-reading instrumentation (FID/PID/calorimetric tubes)					
	If using direct-reading instrumentation, is the equipment:					$\square N$
	a. Capable of detecting perc vapor concentrations in a range of 0-500 ppm					$\square N$
	b. Calibrated against a standard gas prior to and after each use (PID/FID only).					
	c. Inspected for leaks and obvious signs of wear on a weekly basis?					
	d. Kept in a clean and secure area when not in use.					
	e. Verified for accuracy by use of duplicat	te samp	oles (cal	orimetric only)?	$\square Y$	$\square N$
3.	Has the facility maintained a leak log?				$\boxtimes Y$	$\square N$
4.	The following area should be checked for leaks	s by th	e opera	itor:	$\boxtimes Y$	$\square N$
	Hose connections, fitting couplings, and valves	$\boxtimes Y$	□N	Muck cookers	$\square Y$	$\boxtimes N$
	Door gaskets and seating	$\boxtimes Y$	$\square N$	Stills	$\square Y$	$\square N$
	Filter gaskets and seating	$\boxtimes Y$	$\square N$	Exhaust dampers	$\boxtimes Y$	$\square N$
	Pumps	$\boxtimes Y$	$\square N$	Diverter valves	$\square Y$	$\boxtimes N$
	Solvent tanks and containers	$\boxtimes Y$	$\square$ N	Cartridge Filter housing	$\boxtimes Y$	$\square N$
	Water separators	$\overline{\boxtimes} Y$	□N

## **System Inspection and Leak Detection**

Are the following dry cleaning system components inspected weekly for perceptible leaks (sight, smell or touch) while the system is in operation (§63.322(k))? (Inspection with a halogenated hydrocarbon detector or PCE gas analyzer also fulfills the requirement for inspection of perceptible leaks.) $\boxtimes Y = \square NA$
A cities fellowing at the cities of the control of the cities of the cit
Are the following dry cleaning system components inspected monthly for vapor leaks using a halogenated hydrocarbon detector or PCE gas analyzer while the system is in operation? (Any inspection conducted according to this paragraph shall satisfy the requirements to conduct an inspection for perceptible leaks under $\S63.322(k)$ or (I). $\square Y$ $\square N$
(1) Hose and pipe connections, fittings, couplings, and valves;
(2) Door gaskets and seatings;
(3) Filter gaskets and seatings;
(4) Pumps;
(5) Solvent tanks and containers;
(6) Water separators;
(7) Muck cookers;
(8) Stills;
(9) Exhaust dampers;
(10) Diverter valves; and
(11) All Filter housings
Is the halogenated hydrocarbon detector or PCE gas analyzer operated according to the manufacturer's instructions? $\Box Y  \Box N  \boxtimes NA$
Is the vapor leak inspection conducted by placing the probe inlet at the surface of each component interface where leakage could occur and moving it slowly along the interface periphery? $\boxtimes Y  \Box N  \Box NA$
Is the PCE gas analyzer a flame ionization detector, photo ionization detector, or infrared analyzer capable of detecting vapor concentrations of PCE of 25 parts per million by volume? $\Box Y \Box N \Box NA$
To the hele control had a see here delected as each leaf delection as a control of the orange of DCF of DF as to as
Is the halogenated hydrocarbon detector capable of detecting vapor concentrations of PCE of 25 parts per million by volume and indicating a concentration of 25 parts per million by volume or greater by emitting an audible or visual signal that varies as the concentration changes? $\square Y \square N$

#### ADDITIONAL SITE INFORMATION

Facility Name: Bayou Cleaners

**ARMS** #: 103 0336

#### **Inspection Comments:**

- During the inspection of the facility, I met with. Soo Hwan Kim, the responsible official and owner of the dry to dry operations.
- I observed the calendar monthly records for the 2011 and 2012 year in folder with purchase orders and hazardous waste invoices back thru 2010.
- The records were reviewed for the perchloroethylene usage totals and bi weekly leak detection observations. The monitoring and recording of the checks continue to be made on a bi weekly base as required for existing small facilities. The records for leak checks were up to date as of 9/17/2012. The weekly temperatures recorded ranged between of 41–45F.
- The highest 12 month consecutive total was December 2011 with Perc level at 34.6 gallons; the current monthly total was 19.6 gallons. The facility continues to only dry clean 2 times a week. The facility continues to use detergent and water for most of the laundry processing.
- The facility has not purchased perc since 1/11/2011, stated they distill perc every week to clean and keep using. The dryer and associated equipment was not in operation at this time.
- I observed the Spencer Sprint 200 machine. The equipment appears to be clean and in frequent usage. The dryer equipment and containers are well maintained and door closed.
- There were no perchloroethylene odors detected during the inspection of the facility.
- The facility uses a Halogen detector that is capable of readings up to 25 PPM readings. (See Photo)
- The perchloroethylene hazardous waste and containers were closed and located in the secondary containment area. The most recent Hazardous waste invoice was dated as 1/7/2010 for disposal. The drum appeared to be near full capacity. I advised the facility needs to dispose of waste, should not be held for longer than 6 months.
- *The boiler is a small electric unit, exempt from permitting.*
- I gave copy the inspection summary, and obtained signature for the annual certification form.
- The facility is in compliance at this time.
