**COMMENTS:** In a compliance inspection conducted on 09/28/2010, AQD staff observed operations @ Fashion Cleaners. The facility has one PERC dry-cleaning machine and one Petroleum dry-cleaning machine. Mr. Brent Cantville accompanied AQD staff (E. Susky) on the inspection. The facility housekeeping is very good. The spotting board area has metal plating and epoxy paint beneath it. The facility is utilizing its dry-cleaning calendar and had waste manifest, and PERC receipts on-site for the inspection. The drums of hazardous waste are kept in secondary containment, however they were stacked on top of each other. AQD staff suggested that it would exemplify better drum management to have more room for each drum. The facility also has a PERC sniffer and staff know how to use it.
