COMMENTS: Facility was operating without a valid air general permit. I gave Mr. Alverio the internet link for the Dry Cleaner AGP and Compliance Calendar. The facility did not maintain records of weekly condenser temperature monitoring, rolling 12-month totals of perc purchases, leak logs, and Startup/Shutdown/Malfunction plan (owner's manual). The facility did not have a halogenated leak detector required by the NESHAP. The dry cleaning machine was not in operation during the inspection. New owner took over in October 2008.
