PART III: GENERAL CONTROL REQUIREMENTS – Rule 62-213.300 FAC (check ☑ only one box				
Do	es the responsible official of the dry cleaning facility:	for each question)		
1.	Store perc, and wastes containing perc, in tightly sealed & impervious containers?	□Yes □No ⊠N/A		
2.	Examine the containers for leakage?	☐Yes ☐ No ☒ N/A		
3.	Close and secure machine doors except during loading/unloading?	⊠ Yes □ No		
	Drain cartridge filters in their housing or in sealed containers for at least 24 hours prior to disposal?	⊠Yes □ No □ N/A		
	Maintain solvent-to-carbon ratios and steam pressure for carbon adsorber beds according to the manufacturer's specifications?	☐Yes ☐ No ☒ N/A		
	RT IV: PROCESS VENT CONTROLS – Rule 62-213.300 FAC efer to Part II-A.14. Classification: page 1 of 4, this form)			
	1. If the facility classification is a Existing small area source, no controls are requi	red. Proceed to Part V.		
	2. If the facility classification is a <u>New small area source</u> , the machine should be equipped with a refrigerated condenser. Complete section A. below.			
	3. If the facility classification is a Existing large area source , the machine should be equipped with either a refrigerated condenser or a carbon adsorber. Complete both sections A and B below. Carbon adsorber must have been installed prior to September 22, 1993			
	4. If the facility classification is a <u>New large area source</u> , the machine should be econdenser. Complete both sections A and B below.	quipped with a refrigerated		
A.	Has the responsible official of all <u>existing large area & new sources</u> :	(check ☑ only one box for each question)		
1.	Equipped all machines with the appropriate vent controls?	⊠Yes □No		
2.	Equipped dry-to-dry machines with a closed-loop vapor venting system?	⊠Yes □No □N/A		
3.	Equipped the condenser with a diverter valve so airflow will be directed away from the condenser upon opening the door?	⊠Yes □No □N/A		
4.	Measured and recorded the temperature of the outlet exhaust stream of a refrigerated condenser on a weekly basis?	□Yes ⊠No		
5.	Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the condenser exceeded 45° F?	Yes No N/A		
6.	Conducted all temperature monitoring after an appropriate cool-down period and after verifying that the coolant had been completely charged?	∐Yes ⊠No		

PART IV: PROCESS VENT CONTROLS - Rule 62-213.300 FAC (continued)				
В.	Does the responsible official of an existing large or new large area source also:	(check ☑ only one box for each question)		
1.	Measure and record the exhaust temperature on the outlet side of the condenser located on dry-to-dry, reclaimer, and dryer machines on a weekly basis?	□Yes □No		
2.	Measure and record the washer exhaust temperature at the condenser inlet and outlet weekly?	Yes No No		
	a) Is the temperature differential equal to, or greater than $20^{\rm o}$ F?	☐Yes ☐ No ☒ N/A		
3.	Measure and record the perc concentration in the exhaust stream weekly at the end of the final drying cycle while the machine is venting to the adsorber, if machines are equipped exclusively with a carbon adsorber?	□Yes □ No ⊠ N/A		
	a) Is the perc concentration equal to, or less than 100 ppm?	☐Yes ☐ No ☒ N/A		
4.	Assure that the sampling port on the carbon adsorber exhaust for measuring perc concentrations is at least 8 duct diameters downstream of any bend, contraction, or expansion; is at least 2 duct diameters upstream from any bend, contraction, or expansion; and downstream from no other inlet?	□Yes □ No ⊠ N/A		
5.	Equip transfer machines (dryers, reclaimers, and washers) with individual condenser coils?	- Yes No No N/A		
6.	Route airflow to the carbon adsorber (if used) at all times?	□Yes □ No □ N/A		
ı .				
	ART V: <u>RECORDKEEPING REQUIREMENTS</u> – Rule 62-213.300(3) FAC best he responsible official:	(check ☑ only one box for each question)		
1.	Maintain receipts for perc purchased?	Yes 🛛 No		
	Maintain rolling monthly total of yearly perc consumption?			
	Maintain leak detection inspection and repair reports for the following:			
	a) documentation of leaks repaired w/in 24 hrs? or;	Yes No N/A		
	b) documentation of parts ordered to repair leak and leak repaired w/in 2 days and parts installed w/in 5 days of receipt?	☐ Yes ☐ No N/A		
4.	Maintain calibration data? (for applicable direct reading instruments)	☐ Yes ☐ No N/A		
5.	Maintain exhaust duct monitoring data on perc concentrations?	☐ Yes ☐ No N/A		
6.	Maintain a startup/shutdown/malfunction plan?	☐ Yes ⊠ No		
7.	Maintain deviation reports?	☐ Yes ☐ No N/A		
	a) Problem corrected?	Yes No No N/A		
8.	Maintain a compliance plan, if applicable?	Yes No N/A		

PART VI: <u>LEAK DETECTION AND REPAIRS</u> – Rule 62-213.300 FAC

1. Does the responsible official conduct a weekly (for small sources, bi-weekly) leak

(check \square only one box for each question)

detection and repair inspection?	Yes No
2. Does the facility maintain a leak log?	Yes 🖾 No
c) Filter gaskets and seating d) Pumps	Yes No N/A Yes No N/A ust dampers Yes No N/A ter valves Yes No N/A idge filter housings Yes No N/A
4. Which method(s) of detection (is/are) used by the responsible official	?
a) Visual examination (condensed solvent on exterior surfaces) b) Physical detection (airflow felt through gaskets) c) Odor (noticeable perc odor) d) Use of direct-reading instrumentation (FID/PID/calorimetric tubes e) Halogen leak detector **If using direct-reading instrumentation, is the equipment: 1) Capable of detecting perc vapor concentrations in a range of 0-50 2) Calibrated against a standard gas prior to and after each use (PID/3) Inspected for leaks and obvious signs of wear on a weekly basis? 4) Kept in a clean and secure area when not in use?	b)
ROBERT J. STEWART	05/04/2010
Inspector's Name (Please Print)	Date of Inspection
Robert J. Stewart	06/2010
Inspector's Signature	Approximate Date of Next Inspection

COMMENTS: Facility now has only one operational PERC dry cleaning machine as the other unit has been removed. The facility has just recently received its air general permit for operation effective on 4/08/2010. At the time of the inspection, the machine has approximately 15 gallons of PERC only in the left tank. The wiring for the temperature gauge monitoring the exhaust temperature of the refrigerated condensor was found directly inserted and glued into the temperature port at the condensor located in back of the machine. In inspecting the wire during machine operation, moisture was felt around the glue seal at the port. Because the the gauge is attached in this fashion, the gauge is suspect in correctly reading the actual temperature of the refrigerated condensor exhaust. Advised that the facility install a temperature probe in the condensor recommended by the manufacturer so that the correct temperature of the refrigerated condensor can be monitored. The facility did not have a compliance calendar available on site and personnel had not been recording the required temperature or leak checks for the dry cleaning machine. Also no Startup/ Shutdown/Malfunction Plan was available on site. After the inspection, the Department's 2010 Dry Cleaning Compliance Calendar was provided to the facility for its use. In order to verify compliance with Department rules and permit conditions, the facility will be reinspected within three months time.
