System Inspection and Leak Detection

Are the following dry cleaning system components inspected weekly for perceptible leaks (sight, smell or touch) while the system is in operation (§63.322(k))? (Inspection with a halogenated hydrocarbon detector or PCE gas analyzer also fulfills the requirement for inspection of perceptible leaks.) Y N NA

Are the following dry cleaning system components inspected monthly for vapor leaks using a halogenated hydrocarbon detector or PCE gas analyzer while the system is in operation? (Any inspection conducted according to this paragraph shall satisfy the requirements to conduct an inspection for perceptible leaks under §63.322(k) or (l).) Y N NA

- (1) Hose and pipe connections, fittings, couplings, and valves;
- (2) Door gaskets and seatings;
- (3) Filter gaskets and seatings;
- (4) Pumps;
- (5) Solvent tanks and containers;
- (6) Water separators;
- (7) Muck cookers;
- (8) Stills;
- (9) Exhaust dampers;
- (10) Diverter valves; and
- (11) All Filter housings

Is the halogenated hydrocarbon detector or PCE gas analyzer operated according to the manufacturer's instructions? Y N NA

Is the vapor leak inspection conducted by placing the probe inlet at the surface of each component interface where leakage could occur and moving it slowly along the interface periphery? Y N NA

Is the PCE gas analyzer a flame ionization detector, photo ionization detector, or infrared analyzer capable of detecting vapor concentrations of PCE of 25 parts per million by volume? Y N NA

Is the halogenated hydrocarbon detector capable of detecting vapor concentrations of PCE of 25 parts per million by volume and indicating a concentration of 25 parts per million by volume or greater by emitting an audible or visual signal that varies as the concentration changes? Y N NA

Inspection Comments:

- *I met with the responsible official Mr. Kenneth Schumann.*
- *I reviewed the 2009 and 2010 calendar Bi weekly leak check records. The calendar record and the monthly 12 month consecutive Perc totals were up to date. The highest 12 month total was for June 2009 at 69.8 gallons, the current total was 30 gallons*
- *Mr. Schumann maintains the purchase receipts for the perchloroethylene and Hazardous waste manifest copies within the calendar record. The purchases invoice for March 2010 was 19.3 gallons of perchloroethylene.*
- *The most recent invoice was 6/5/2010 for the disposal of perc waste and filter cartridges. Mr. Schumann's procedure for filter change out is to leave the Perchloroethylene cartridges in over the weekend. Then operates dry to dry 3 cycles and recovers the perchloroethylene. He stated he does not use as much perc since fixed leaks, and the 12 month totals also indicate a decrease in perc usage.*
- *The temperature recording is not required for existing small machines classification.*
- *I observed the HP 25 dry to dry machine; was in operation at this time.*
- *I did not detect perchloroethylene odors during this inspection and observation of the dry to dry machine (See photos).*
- *The separator water is then transferred to the Galaxy Mister for evaporation. (See photo)*
- *The shutdown procedures and the emergency plan and contacts are posted on the dryer (See photo).*
- *The hazardous material drums and water evaporator were located in the secondary containment to prevent perchloroethylene leakage. The evaporator cartridges had been changed 7/1/2010.*
- *I gave him the P2R2 pamphlet and brochure with the dry cleaner summary handout.*
- *The facility was now operating in compliance of the general permit conditions.*
