COMMENTS:

- I toured the facility with the facility contact Johanna. Mr. Milby the owner was not in at the time of the inspection.
- I observed the calendar records. The leak checks were up to date. The highest usage rate was 99 gallons for August 2006. This was an error, had added instead of subtracting the last years perc purchase. The correct total was 43 gallons. I advised should recheck the calendar for other errors.
- The facility does not have an evaporator. They dispose of water is Hazardous waste. I left a copy of the FDEP separator water guidance with instructions to read. I left the Annual Certification and requested the copy be mailed in after signed. Mr. Milby faxed his copy also after signing.
- I left a copy of the P2 pamphlet and the rule regarding the purchase of a halogen detector prior to July 27, 2008.
- I observed the dryer and equipment. The dryer was not in operation at the time of inspection. The covers were in place for the water separator, and container for the collection of the water. The waste containers were closed and resting on a secondary containment pallet.
- The source is exempt of the temperature reading requirements.
- The facility purchased a new Hurst boiler.
- This source appears to be in compliance.
