COMMENTS:

- I met with the facility contact and the owner, Mr. Steve Milby during the inspection.
- I observed the 2006 and 2007 calendar records. The Bi weekly leak checks were up to date. The source is exempt of the temperature reading requirements. Mr. Milby stated it was always below 45F.
- The highest usage rate was 104 gallons for May 2007. I advised Mr. Milby, the 2008 calendars would no longer be sent to the facility by SBEAP. I gave him internet information and link to get a copy of the calendar. The most recent purchase order for perc C&D labs for 10 gallons.
- I observed the dryer and equipment. The dryer was not in operation at the time of inspection. The covers were in place for the water separator, and container for the collection of the water. The waste containers were closed and resting on a secondary containment pallet.
- The facility does not have an evaporator. They dispose of separator water as Hazardous waste.
- I left a copy of the FDEP separator water guidance and the P2 pamphlet. I asked if he had purchased the Halogen detector yet, he stated no he had been waiting for the price to go down. I that the price ranges from \$79 up to \$250 for most of the devices I had seen to date. I advised Mr. Milby of the rule regarding the purchase of a halogen detector prior to July 27, 2008, and that failure to obtain by that date could result in a warning letter and penalties. He stated business had been very slow and was concerned that if does not pick up he may not been in business next year.
- This source appears to be in compliance at this time.
