Inspection Comments:

- *I met with Ms. Rosie Dianna, the responsible official of the dry-to-dry operations, for the facility inspection.*
- *I observed the 2010 – 2011 calendar records for the perchloroethylene totals and leak detection observations. (See Photo)*
- *The highest Perc total in the previous 12 month period was 40.60 gallons in July 2011. The purchase records and the hazardous waste manifest were in yellow folder with the calendar records. The most recent P.O. was for 7/21/2011 for 19.3 gallons. The last Hazardous waste disposal was 4/16/2011.*
- *The temperatures recorded ranged between of 40 °F – 41°F. The monitoring and recording of the leak checks were up to date*
- *I observed the Aero Tech dry-to-dry machine and associated equipment; which was not in operation at this time. The machine is clean*
- *She stated the dry to dry is only operated 2-3 cycles operated times a day.*
- *Ms. Dianna demonstrated the use of her TIF XP 1A model Halogen leak detector. The detector did not sound alarm when checking the dry to dry. (See Photo).*
- *There were no perchloroethylene odors detected during the inspection of the facility.*
- *The perchloroethylene hazardous waste containers were closed and located in secondary containment. Mrs. Rosie collects the separator water for hazardous waste disposal. (See photos)*
- *Ms. Diana Rosie signed the annual certification form.*
- *I gave her the P2 pamphlet and brochure and inspection summary. She stated the Perc was becoming more expensive. I discussed the possible use of Perc alternative solutions and conversion of machine. She stated she needs the calendar. I sent her email regarding fabrisolv/ecosolv and calendar.*
- *This facility was in compliance at this time.*

requirements evaluated during this inspection, the facility is in compliance with Florida Administrative Code (F.A.C.).

requirements evaluated during this inspection, the following:

Follow-up Action Required

SSM) If no specific procedures are available from the manufacturer, the facility must develop a SSM plan that describes procedures for maintaining and repairing the equipment during periods of startup and shutdown associated with normal operation. EPA's O&M manual may be used if no manufacturer information is available. Keep log of maintenance action information.

Maintain all purchase receipts in a log kept on-site for all perchloroethylene solvent consumption.

Develop and implement a record keeping procedure that maintains monthly purchases (perc) as a consecutive twelve month log.

Obtain verification from the manufacturer that the evaporator is designed to measure 45°F with an accuracy of ±2°F, or determine this by another method that the Department would consider appropriate.

Facility may choose to either dispose of perchloroethylene solvent waste as hazardous waste, or incorporate a carbon filtration system with the evaporator (as per the State's guidelines).

Store all perchloroethylene and perchloroethylene-contaminated tightly sealed containers, which are impervious and chemically un-reactive to the solvent.

Develop and implement a leak detection inspection and repair program. Maintain a log of leak detection inspection and repair records.

Develop and implement a leak detection inspection and repair program. Use at least one of the methods outlined in Part II, Section 7(a), of the general permit (b), for leaks. Keep records of items of detection, unless repair equipment must be evaluated hours of detection.
