COMMENTS: This facility has a relocatable crusher, however, the crusher will not be moved from site to site to perform crushing. The crusher does not have any stacks and is not located within a bui`lding. The crusher runs on electricity only. An emergency back-up 800 kW generator is on site, but is only used during emergencies or power outages. The generator is not tested annually as part of the compliance testing. During the compliance test, the yard was observed to be wet. The crusher has spray bars located at every drop point on the unit, as well as the entrance and exit to the main crusher. The unit was tested at 250 tph during the compliance test. The highest observed opacity was 1.6% from conveyer drop point 'J.' All other points had no visible emissions. Water mist was observed at all the points. No objectionable odors were detected. Stephen Schwebke, consultant for Southern Environmental Sciences, Inc. was present for the test.
