COMMENTS: John Saunders was at the facility for a few minutes before he had to leave for a doctor's appointment. He signed the ASOC and left. The inspector reviewed the 2005 and 2006 compliance calendars. Last year's perc purchases totaled 230 gallons. This year's perc purchases totaled 54.3 gallons. Two of the receipts were available and one receipt for 20 gallons was not available. John stated that the vendor delivered the perc and the owner of Super Hangers "quit" the business the next day. John stated he never received the invoice for that perc. I suggested he add the 20 gallons to his perc totals for accuracy. While reviewing the 2006 compliance calendar, it was noted that the entire month of December was pre-filled out with temperatures and leak checks, including days that have not yet occurred. It was documented on the Title V Air Quality General Permit Inspection Summary Report in the comments section to not pre-fill in the data before it actually occurs! It was also noted to label the condensate water buckets. It was also noted in the comments section that new EPA rules require monthly leak checks with a halogen leak detector. There is a new machine onsite, as well. For the next inspection at this facility, the inspector should closely look at the perc consumption and record keeping.
