| l <u></u>   |  |
| PART I:       INSPECTION COMPLIANCE STATUS       (c         IN COMPLIANCE       MINOR Non-COM   |  |
| [   |  |
| PART II:FACILITY CLASSIFICATION<br>(check $\square$ only one box in A)- Rule 62   | 2-213.300 FAC  |
| A. 1. Existing small area source<br>dry-to-dry only, $x < 140$ gal/yr<br>transfer only, $x < 200$ gal/yr<br>both types, $x < 140$ gal/yr<br>(constructed before 12/9/91)<br>3. Existing large area source<br>dry-to-dry only, $140 \le x \le 2,100$ gal/yr<br>transfer only, $200 \le x \le 1,800$ gal/yr<br>both types, $140 \le x \le 1,800$ gal/yr<br>(constructed before 12/9/91)<br>5. Ineligible for General Permit<br>d rop store/out of business/petroleum /<br>facility exceeds above limits | 2. New small area source<br>dry-to-dry only, $x < 140$ gal/yr<br>transfer only, $x < 200$ gal/yr<br>both types, $x < 140$ gal/yr<br>(constructed on or after 12/9/91)<br>4. New large area source<br>dry-to-dry only, $140 \le x \le 2,100$ gal/yr<br>transfer only, $200 \le x \le 1,800$ gal/yr<br>both types, $140 \le x \le 1,800$ gal/yr<br>(constructed on or after 12/9/91) |

**B**. The sum of the volume of all perchloroethylene (perc) purchases made in each of the previous 12 months by this dry cleaning facility was 45.00 gallons.

| PART III: <u>GENERAL CONTROL REQUIREMENTS</u> – Rule 62-213.300 FAC   |             | ```` | check ☑<br>x for each o | only one<br>question) |
|---|-------------|------|-------------------------|-----------------------|
| 1. Is all perc, and wastes containing perc, in tightly sealed & impervious containers?  | $\boxtimes$ | Yes  | 🗌 No                    | N/A                   |
| 2. Are all perc. containers leak free ?   | $\boxtimes$ | Yes  | 🗌 No                    | N/A                   |
| 3. Are all machine doors kept closed and secured except during loading/unloading?   | $\boxtimes$ | Yes  | 🗌 No                    |                       |
| <ol> <li>Are cartridge filters d rained in their housing or in sealed containers for at least<br/>24 hours prior to disposal?</li> </ol>  | $\square$   | Yes  | 🗌 No                    | N/A                   |
| 5. Has each dry cleaning system installed after December 21, 2005 at an area source, routed the air-PCE gas-vapor stream contained within each dry cleaning machine through a refrigerated condenser and passed the air-PCE gas-vapor stream from inside the dry cleaning machine drum through a non-vented carbon adsorber or equivalent control device immediately before the door of the dry cleaning machine is opened? The carbon adsorber must be desorbed in accordance with |             |      |                         |                       |
| manufacturer's instructions   | $\boxtimes$ | Yes  | 🗌 No                    | N/A                   |
| 6. Is solvent-to-carbon ratios and steam pressure for carbon adsorber beds maintain according to the manufacturer's specifications?   |             | Yes  | 🗌 No                    | N/A                   |
|   |             |      |                         |                       |

| PART IV:    | <u>PROCESS VENT CONTROLS</u> – Rule 62-213.300 FAC                   |
|-------------|--|
| (Refer to P | Part II-A.14. Classification: page <u>1</u> of <u>4</u> , this form) |

1. If the f acility classification is an existing small area source, no controls are required. Proceed to Part V.

2. If the facility classification is a <u>new small area source</u>, the machine should be equipped with a refrigerated condenser. Complete section A. below.

3. If the fa cility classification is an **existing large area source**, the machine should be equipped with either a refrigerated condenser or a carbon adsorber. **Complete both sections A and B below.** *Carbon adsorber must have been installed prior to September 22, 1993* 

4. If the facility classification is a <u>new large area source</u>, the machine should be equipped with a refrigerated condenser. Complete both sections A and B below.

| A. | . Has the responsible official of all existing large area & new sources:   |             | `   | check ☑<br>x for each c | only one<br>question) |
|----|--|-------------|-----|-------------------------|-----------------------|
| 1. | Equipped all machines with the appropriate vent controls?  | $\square$   | Yes | 🗌 No                    |                       |
| 2. | Equipped dry-to-dry machines with a closed-loop vapor venting system?  | $\boxtimes$ | Yes | 🗌 No                    | N/A                   |
| 3. | Equipped the condenser with a diverter valve so airflow will be directed away from the condenser upon opening the door?                      | $\boxtimes$ | Yes | 🗌 No                    | N/A                   |
| 4. | Measured and recorded the temperature of the outlet exhaust stream of a refrigerated condenser on a weekly basis?                            | $\boxtimes$ | Yes | 🗌 No                    | N/A                   |
| 5. | Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the condenser exceeded $45^{\circ}$ F?                      | $\boxtimes$ | Yes | 🗌 No                    | N/A                   |
| 6. | Conducted all temperature monitoring after an appropriate cool-down period and after verifying that the coolant had been completely charged? | $\square$   | Yes | 🗌 No                    |                       |

| PA              | ART IV: PROCESS VENT CONTROLS – Rule 62-213.300 FAC (continued)   |           |            |      |         |
|-----------------|---|-----------|------------|------|---------|
| <b>B.</b><br>1. | <b>For all existing large or new large area sources:</b><br>Is the exhaust temperature on the outlet side of the condenser located on dry-to-dry, reclaimer, and dryer machines measured and recorded on a weekly basis?  | $\bowtie$ | Yes        | 🗌 No |         |
| 2.              | Is the washer exhaus t temperature at the condenser inlet and outlet measured<br>and recorded weekly?   |           | Yes<br>Yes | □ No | N/A N/A |
| 3.              | Is the perc concentration in the exhaust stream inlet and outlet measured weekly<br>at the end of the final drying cycle while the machine is venting to the adsorber,<br>if machines are equipped exclusively with a carbon adsorber?  |           | Yes        | No   | N/A     |
|                 | a) Is the perc concentration equal to, or less than 100 ppm?  |           | Yes        | 🗌 No | N/A     |
| 4.              | Is the sampling port on the carbon adsorber exhaust for measuring<br>perc concentrations at least 8 duct diameters downstream of any bend,<br>contraction, or expansion; is at least 2 duct diameters upstream from any bend,<br>contraction, or expansion; and downstream from no other inlet? |           | Yes        | 🗌 No | N/A     |
| 5.              | Are transfer machines equipped (dryers, reclaimers, and washers) with individual condenser coils?   |           | Yes        | 🗌 No | N/A     |
| 6.              | Is airflow routed to the carbon adsorber (if used) at all times?  |           | Yes        | 🗌 No | N/A     |

| PART V: <u>RECORDKEEPING REQUIREMENTS</u> – Rule 62-213.300(3) FAC   | `     | eck ☑ | only one<br>uestion) |
|--|-------|-------|----------------------|
| 1. Are receipts maintained for all perc purchased?   | Yes [ | No    |                      |
| 2. Are rolling monthly total s of yearly perc consumption maintained ?   | Yes [ | No    |                      |
| 3. Are leak detection inspection and repair reports maintained for the following:                                |       |       |                      |
| a) Of any leaks repaired w/in 24 hrs? or;  | Yes [ | No    | N/A                  |
| b) Of any parts ordered to repair leak and leak repaired w/in 2 days and parts installed w/in 5 days of receipt? | Yes [ | No    | N/A                  |
| 4. Is calibration data maintained for applicable direct reading instruments?                                     | Yes [ | No No | N/A                  |
| 5. Is exhaust duct monitoring data on perc concentrations maintained?  | Yes [ | No No | N/A                  |
| 6. Is a startup/shutdown/malfunction plan maintained for each machine?   | Yes [ | No No |                      |
| 7. Are deviation reports maintained?   | Yes [ | No No | N/A                  |
| a) Problem corrected?  | Yes [ | No No | N/A                  |
| 8. Is a compliance plan maintained , if applicable?  | Yes [ | No No | N/A                  |
|  |       |       |                      |

| PA | ART VI: LEAK DETECTION AND REPAIRS – Rule 62-213.300 FAC   | (ch                                       | neck 🗹                               | only one   |
|----|--|---|--------------------------------------|--|
| 1. | What type of leak detection equipment is used to detect leaks?   | box                                       | for each                             | question)  |
|    | Halogenated hydrocarbon detector PCE gas analyzer None used  |   |                                      |  |
| 2. | Is the halogenated hydrocarbon detector or PCE gas analyzer operated according to  |   |                                      |  |
|    | the manufacturer's instructions (manual was available and RO could demonstrate   |   |                                      |  |
|    | procedure) ? 🖂   | Yes [                                     | ] No                                 |  |
| 3. | For major sources is the halogenated hydrocarbon detector or PCE gas analyzer  |   |                                      |  |
|    | operated according to EPA Method 21 ?  | Yes [                                     | ] No                                 | N/A  |
| 4. | Is the vapor leak inspection conducted by placing the probe inlet at the surface of  |   |                                      |  |
|    | each component interface where leakage could occur and moving it slowly along  |   |                                      |  |
|    | the interface periphery?   | Yes [                                     | No                                   |  |
| 5. | Is the PCE gas analyzer a flame ionization detector, photo ionization detector, or   |   |                                      |  |
|    | infrared analyzer capable of detecting vapor concentrations of PCE of 25 parts per   |   |                                      |  |
|    | million by volume (based on documented specifications) ?   | Yes                                       | No                                   | N/A  |
| 6. | Is the halogenated hydrocarbon detector capable of detecting vapor concentrations  |   |                                      |  |
|    | of PCE of 25 parts per million by volume (based on documented specifications) and  |   |                                      |  |
|    | indicating a concentration of 25 parts per million by volume or greater by emitting  |   |                                      |  |
|    | an audible or visual signal that varies as the concentration changes? $\hfill \hfill $ | Yes [                                     | ] No                                 | N/A  |
| 7. | Are the following dry cleaning system components inspected weekly for perceptible leaks (sight, sm   | nell or tou                               | uch) whi                             | le the   |
|    | system is in operation (§63.322(k))?   |   |                                      |  |
|    | (Inspection with a halogenated hydrocarbon detector or PCE gas analyzer also fulfills the requirement for insp   | pection of                                | perceptib                            | le leaks)  |
