| PART III: GENERAL CONTROL REQUIREMENTS – Rule 62-213.300 FAC   |             |          | check 🗹 ox for each o | only one<br>question) |  |
|--|-------------|----------|-----------------------|-----------------------|--|
| 1. Is all perc, and wastes containing perc, in tightly sealed & impervious containers?   | $\boxtimes$ | Yes      | ☐ No                  | N/A                   |  |
| 2. Are all perc. containers leak free?   | $\boxtimes$ | Yes      | ☐ No                  | □ N/A                 |  |
| 3. Are all machine doors kept closed and secured except during loading/unloading?  |             | Yes      | ☐ No                  |                       |  |
| 4. Are cartridge filters d rained in their housing or in sealed containers for at least 24 hours prior to disposal?  | $\boxtimes$ | Yes      | ☐ No                  | □ N/A                 |  |
| 5. Has each dry cleaning system installed after December 21, 2005 at an area source, routed the air-PCE gas-vapor stream contained within each dry cleaning machine through a refrigerated condenser and passed the air-PCE gas-vapor stream from inside the dry cleaning machine drum through a non-vented carbon adsorber or equivalent control device immediately before the door of the dry cleaning machine is opened? The carbon adsorber must be desorbed in accordance with manufacturer's instructions. |             | Yes      | ☐ No                  | N/A                   |  |
| Is solvent-to-carbon ratios and steam pressure for carbon adsorber beds     maintain according to the manufacturer's specifications?   |             | Yes      | ☐ No                  | N/A                   |  |
|  |             |          |                       |                       |  |
| PART IV: PROCESS VENT CONTROLS – Rule 62-213.300 FAC (Refer to Part II-A.14. Classification: page 1 of 4, this form)  1. If the f acility classification is an existing small area source, no controls are required. I   | Proces      | ed to P  | eart V.               |                       |  |
| <ol> <li>If the facility classification is a <u>new small area source</u>, the machine should be equipped condenser. Complete section A. below.</li> </ol>   |             |          |                       |                       |  |
| 3. If the fa cility classification is an <b>existing large area source</b> , the machine should be equipped with either a refrigerated condenser or a carbon adsorber. <b>Complete both sections A and B below.</b> Carbon adsorber must have been installed prior to September 22, 1993   |             |          |                       |                       |  |
| 4. If the facility classification is a <u>new large area source</u> , the machine should be equipped condenser. Complete both sections A and B below.  | with        | a refriş | gerated               |                       |  |
| A. Has the responsible official of all existing large area & new sources:  |             |          | check 🗹 ox for each o |                       |  |
| 1. Equipped all machines with the appropriate vent controls?   | . 🗆         | Yes      | ☐ No                  |                       |  |
| 2. Equipped dry-to-dry machines with a closed-loop vapor venting system?   |             | Yes      | ☐ No                  | □ N/A                 |  |
| 3. Equipped the condenser with a diverter valve so airflow will be directed away from the condenser upon opening the door?   |             | Yes      | ☐ No                  | □ N/A                 |  |
| 4. Measured and recorded the temperature of the outlet exhaust stream of a refrigerated condenser on a weekly basis?   |             | Yes      | ☐ No                  | □ N/A                 |  |
| 5. Repaired or adjusted the equipment within 24 hours if the exhaust temperature of the condenser exceeded 45° F?  |             | Yes      | ☐ No                  | □ N/A                 |  |
| 6. Conducted all temperature monitoring after an appropriate cool-down period and after verifying that the coolant had been completely charged?  |             | Yes      | ☐ No                  |                       |  |

| PART IV: PROCESS VENT CONTROLS – Rule 62-213.300 FAC (continued)  |   |   |                      |  |                 |                               |  |
|---|---|---|----------------------|--|-----------------|-------------------------------|--|
| B. For all existing large or new large area sources:  |   |   |                      |  |                 |                               |  |
| Is the exhaust temperature on the outlet side of the condenser located on dry-to-dry, reclaimer, and dryer machines measured and recorded on a weekly basis?  |   | Yes   |                      | No   |                 |                               |  |
| 2. Is the washer exhaus t temperature at the condenser inlet and outlet measured and recorded weekly?   |   | Yes   |                      | No   | _               | N/A                           |  |
| a) Is the temperature differential equal to, or greater than 20° F?   |   | Yes   |                      | No   |                 | N/A                           |  |
| 3. Is the perc concentration in the exhaust stream inlet and outlet measured weekly at the end of the final drying cycle while the machine is venting to the adsorber, if machines are equipped exclusively with a carbon adsorber?   |   | Yes   |                      | No   |                 | N/A                           |  |
| a) Is the perc concentration equal to, or less than 100 ppm?  |   | Yes   |                      | No   |                 | N/A                           |  |
| 4. Is the sampling port on the carbon adsorber exhaust for measuring perc concentrations at least 8 duct diameters downstream of any bend, contraction, or expansion; is at least 2 duct diameters upstream from any bend, contraction, or expansion; and downstream from no other inlet? |   | Yes   |                      | No   |                 | N/A                           |  |
| 5. Are transfer machines equipped (dryers, reclaimers, and washers) with individual   | П | Yes   |                      | No   |                 | N/A                           |  |
| condenser coils?  | _ |   |                      |  |                 |                               |  |
| 6. Is airflow routed to the carbon adsorber (if used) at all times?   |   | Yes   |                      | No   |                 | N/A                           |  |
|   |   | Yes   |                      | No   |                 | N/A                           |  |
|   |   | Yes   |                      | No   |                 | N/A                           |  |

| PART VI: <u>LEAK DETECTION AND REPAIRS</u> – Rule 62-213.300 FAC (check ☑ only one |  |                                 |  |   |  |
|--|--|---------------------------------|--|---|--|
| 1.   | What type of leak detection equipment is used to detect leaks?   | bo                              | question)  |   |  |
|  | ☐ Halogenated hydrocarbon detector ☐ PCE gas analyzer ☐ None used  |                                 |  |   |  |
| 2.   | Is the halogenated hydrocarbon detector or PCE gas analyzer operated according to  |                                 |  |   |  |
|  | the manufacturer's instructions (manual was available and RO could demonstrate   |                                 |  |   |  |
|  | procedure) ?   | Yes                             | ☐ No   |   |  |
| 3.   | For major sources is the halogenated hydrocarbon detector or PCE gas analyzer  |                                 |  |   |  |
|  | operated according to EPA Method 21 ?  | Yes                             | ☐ No   | N/A   |  |
| 4.   | Is the vapor leak inspection conducted by placing the probe inlet at the surface of  |                                 |  |   |  |
|  | each component interface where leakage could occur and moving it slowly along  |                                 |  |   |  |
|  | the interface periphery?   | Yes                             | ☐ No   |   |  |
| 5.   | Is the PCE gas analyzer a flame ionization detector, photo ionization detector, or   |                                 |  |   |  |
|  | infrared analyzer capable of detecting vapor concentrations of PCE of 25 parts per   |                                 |  |   |  |
|  | million by volume (based on documented specifications) ?   | Yes                             | ☐ No   | N/A   |  |
| 6.   | Is the <u>halogenated hydrocarbon detector</u> capable of detecting vapor concentrations   |                                 |  |   |  |
|  | of PCE of 25 parts per million by volume (based on documented specifications) and  |                                 |  |   |  |
|  | indicating a concentration of 25 parts per million by volume or greater by emitting  |                                 |  |   |  |
|  | an audible or visual signal that varies as the concentration changes? 🖂  | Yes                             | ☐ No   | N/A   |  |
| 7.   | Are the following dry cleaning system components inspected weekly for perceptible leaks (sight, sm   | nell or                         | touch) while   | le the  |  |
|  | system is in operation (§63.322(k))?   |                                 |  |   |  |
|  | (Inspection with a halogenated hydrocarbon detector or PCE gas analyzer also fulfills the requirement for insp   | pection                         | of perceptib   | le leaks)   |  |
|  | b) Door gaskets and seating  Yes  No N/A h) Stills Y   |                                 | <ul><li>□ No</li><li>□ No</li><li>□ No</li><li>□ No</li><li>□ No</li></ul> | <ul><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li></ul> |  |
| 8.   | Are the following dry cleaning system components inspected monthly for vapor leaks using a haloge  | enated                          | hydrocarbo   | on detector   |  |
|  | or PCE gas analyzer while the system is in operation? (Any inspection conducted according to this parag  | raph sl                         | hall satisfy th  | ne  |  |
|  | requirements to conduct an inspection for perceptible leaks under §63.322(k) or (l))   |                                 |  |   |  |
|  | b) Door gaskets and seating   Yes   No   N/A   N/A   N/A   Stills   Yes   Yes   No   N/A   N/A   N/A   N/A   N/A   N/A   Yes   Yes | Yes<br>Yes<br>Yes<br>Yes<br>Yes | <ul><li>□ No</li><li>□ No</li><li>□ No</li><li>□ No</li><li>□ No</li></ul> | <ul><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li><li>N/A</li></ul> |  |

| PART VI: LEAK DETECTION AND REPAIRS – Rule 62-213.300 FAC (continued)  |                                     |  |  |  |
|--|-------------------------------------|--|--|--|
| 9. What evidence suggests that leak checks are performed as required?  ☐ Leak log documentation ☐ RO Assurances ☐ On-site Explain other: | e observation                       |  |  |  |

COMMENTS: On the dry cleaning 2013 compliance calendar for weekly annotated leak inspections, the week of Nov. 4, 2013 was not annotated (missing) as having been conducted. Also leaks checks on the 2014 compliance calendar for Jan-June have been annotated on the opposite side of the calendar on the June-December side. The annotations need to be redone on the right side of the calendar for the corresponding dates that the leack checks were conducted. A waste drum with the hose going into it near the dry cleaning machine (possibly containing PERC separator water) needs to have the metal ring around the drum put back on to seal the drum when not adding PERC containing waste into the drum. Also the temperature monitoring annotations for the last year indicates the condenser exhaust temperature is reading at or near the 45 degree F limit (44-45 degrees F annotated on the calendar). Recommend that the dry cleaning machine be serviced as soon as possible to clean the condenser coils and/or add additional refrigerant to prevent the machine from exceeding the 45 degree F limit for condenser exhaust temperature and causing a violation at the facility.
