COMMENTS: The unit was placed into operation while I was performing this inspection. The unit came to a temperature of ~1700°F prior to loading the unit, temperature remained at ~1650° F while in service. The new bricks were installed in the crematory walls and floor on January 12, 2008. Only human remains are cremated at this facility, plain cardboard containers are used for the cremation. A temperature chart recorder is installed and the chart records do not indicate that there are any problems with the crematory operations.
