**COMMENTS:** The door seal leak on the southern-most machine still had not been fixed by the date of my inspection. However, the facility has not been using this machine and will not use it again until the leak is fixed. According to the operator, Bruce McDaniel, the part needed to fix the door seal is currently on back-order. In addition, the needles for the refrigerant pressure gauges on both machines were still broken, however, the condenser outlets were meeting the required 45 degree temperature, therefore it is not an emissions violation. It appeared that the records were being kept, except that the arithmatic for determining the rolling 12-month totals was not correct. I explained to Mr. McDaniel and Mr. Rivera how to correct the 12-month rolling totals. Based on my inspection and the facility's continuing efforts to correct the alleged violations, I recommend closing WN #2010-0289A.
