**COMMENTS:** This visible emissions test was conducted on the newer silo for cement loading and mixer or batching truck.and alsoon the old silo cement loading and flyashloading.All observed opacities were zero percent. Most of the yard was dry, except where the truck washing area was located. Some dust was observed going up into the air from vehicular movement, but the dust was not leaving the property. The old silo baghouse had a problem during the test but it was corrected and the test passed with zero percent opacity.
