COMMENTS: I (Steven Sherman) and Chris Haines went to this facility for a walkthrough inspection. We met Bob Mullens who is the manager for the block plant. Mr. Mullens told us that the ready-mix plant has been shutdown now for about a year. The block plant has lowered production from about 60,000 blocks a day to 9,000 blocks a day. During the blocking process, the aggregate is loaded up into a hopper which feeds a covered conveyor belt. The conveyor belt brings the aggregate to a hopper which is next to the cement silos. The aggregate mixes with the cement in a mixing chamber and then is fed into the block plant by a covered conveyor. We inspected the aggregate piles. Sprinklers were running on the sand pile, but the rock pile did not need sprinklers since it is a heavier material. No fugitive emissions were seen from the aggregate piles. We then witnessed the mixing process which happens about every 5 to 10 minutes. No visible emissions were seen from the mixing process. We left the facility at approximately 11:15. From this inspection, the facility appears to be in compliance.
