COMMENTS: The facility keeps monthly records of the styrene containing resin and gel coat usages. The usages are well under the 12-month limit of 284,000 lbs of material. The resins and gelcoats are applied by spray coating inside of a spray booth with a filtration system. Due to decline in business demand, filters are changed out on an as needed basis. The finished product cures inside of the building and can not be placed outside in the sun during the curing process. Acetone is used to clean the equipment and all washing are directed into a container. Ashland chemical picks up this container and properly disposes of the used acetone.

Spill containers (barrels on wheels) are utilized inside of the shop. The facility hasn't had any spills, but uses the containers as a preventative. Any spills that may occur will be cleaned up immediately. The facility also appeared to employ good housekeeping practices and makes reasonable efforts to minimize evaporative losses.

At the time of the inspection, the facility appeared to be in compliance.
