COMMENTS: Norma Ali met with Kent Bottorf, Consultant and Sonny Dunaway, Plant Manager on April 15, 2009, to audit the compliance test conducted on all three emission points. Due to slow business, one truck with 26.54 tons was used to load up cement in all three silos. The Northwest Cement silo was the first to test. Test was stopped due to pressure relief valve leak. Test will be re-scheduled. The test for the Northeast silo had an opacity of 0%. The Southwest silo was tested during 16 minutes. Test stopped when the truck was empty.

The unloading rate was= 26.54 tons/61 min*60 min = 26.10 tons/hr

Main roads are paved, which were wet on some areas and fairly clean, at the time of inspection. Roads on the back of the facility are dirt, where they storage the concrete beams-braces.

After the test, inspector, consultant and Facility's Manager conducted a walkthrough at the facility to observe the conditions and process. Facility appeared to be in good operating conditions at the time of inspection.
