COMMENTS: The purpose of the visit was an annual inspection. We found the following:  The record keeping of the Perc purchase was very good and organized.					

- 2. The gauge temperature reading was recorded weekly with an average of 43 F with none of the reading were above 45 F even though this facility is exempt from recording the temperature.
- 3. The vicinity around the dry cleaning machine was very clean and well maintained.
- 4. The Perc was loaded directly with a hookup connection. No container of perc was at the site.
- 5. The monthly perc consumption was recorded correctly with no changes since our last inspection since no perc was bought during the year.
- 6. The machine was in operation today. No leaks or odors were noticed.
- 7. The waste from the dry cleaning machine was properly store in the tight lid containers to be disposed in accordance with regulations.
- 8. This facility classified as a small area source.
