**COMMENTS:** •During the inspection of the facility, I met with Georgina Ellerbee, the responsible official of the dry to dry operations.

- I observed the calendar records for the perchloroethylene totals and leak detection observations. The highest 12 month total was 45 gallons for 12/2007. The temperatures are not required for recording on the existing small facility.
- The monitoring and recording of the leak checks are made on bi weekly bases. Ms. Ellerbee stated her husband had changed the cartridge filters in September 2007. The most recent perc purchase was 19.3. She stated she only purchase 2 drums a year typically. The next Haz waste disposal will be in January 2008 by Atlantic.
- Ms. Ellerbee has already purchased and using a Halogen Detector, an Eco Sensor Halogen Detector. It was plugged in for constant monitoring of Perc, in her shop. I observed the Union Spa machine, was not in operation at the time of the inspection. There were no perchloroethylene odors detected during the inspection of the facility.
- The evaporator is a Galaxy mister. There was a top on the container. The dryer equipment and containers are well maintained and closed.
- The perchloroethylene hazardous waste and containers were closed and in secondary containment.
- I gave her a copy of the water separator guidance document. Ms. Ellerbee thanked me for helping her with the ordering of her fee booklet
- I informed her of the state not mailing out the calendar. I gave her information packet for obtaining her copy through Fed Ex coping facilities. She does not have her own computer or access to internet at this time.
- This facility appears to be in compliance at this time.
