**COMMENTS:** Facility was operating during the inspection. I observed two trucks being loaded. No visible emissions from operations or fugitive dust was observed on-site. Stock piles were being sprayed with water and facility grounds were already wet due to a recent rain event. Mr. Jon Thomas explained that baghouse maintenance is conducted every 6 months or as needed. He does keep records of fuel usuage (diesel) for the on-site crusher and usuage is below the pernitted limit. The crusher is used regularly but not at the time of inspection. The facility is in compliance with its Air General Permit.
