COMMENTS: All records requested were available for review. Weekly bag-house inspections are performed. This facility only uses #2 diesel fuel and keeps fuel inventory records, however because they do not utilize off-road diesel they do not keep records of fuel sulfur content. The facility used roughly 20100 gallons of number 2 diesel and processed approximately 44,000 tons of material in 2007. Since the last inspection and resulting issues regarding yard cleanliness, Lafarge has relocated a vacuum sweeper to this facility. During my inspection I did not notice material being tracked onto the roadway from the yard. The working yard was reasonably clean. A VE test was performed on May 23, 2007 with a reported VE of 0%.
