**COMMENTS:**

- During the inspection of the facility, I met with Mrs. Pascucci, the responsible official and owner Mr. Patrick Pascucci was not in.
- I informed Mrs. Pascucci, that the 2008 calendar would have to be obtained through the SBEAP site and gave her a copy information and location of the internet link. I observed the 2006 and 2007 calendar records for the perchloroethylene totals and leak detection observations. The temperatures of both dryers recorded ranged between of 34 °F. – 37°F and 38°F, this is below 45°F. The weekly checks were up to date through December. The perc totals were in one calendar.
- Mrs. Ause Pascucci records the temperatures and performs the observation checks. The purchase invoices and waste manifest records were with the calendar. The most recent Perc purchase was 11/4/07 for 77.3 gallons. The most recent Hazardous waste was 12/3/2007 for disposal of one 55 gal drum. The Hazardous waste container was closed and located on secondary containment pallet. (See Photo)
- The facility has an evaporation unit called Zero waste II, which monitors the Perc in the separation water, and carbon filtering, is done before water is misted to the outside.
- I observed the two Aero Tech machines; they were not in operation during the inspection. The dry cleaning machines and associated equipment is relatively new and in good condition. (See photos).
- There were no perchloroethylene odors detected during the inspection of the facility.
- I gave Mrs. Pascucci, the annual certification form and told her to have signed and mail the form back to the AQ office. I received the copy on 1/17/2008.
- I asked if they had purchased a halogen detector. She stated they had not. I informed them of the rule changes, effective 2008 they must obtain a Halogen detector for the performance of the leak checks, as could result in a violation.
- I gave her P2 booklets, the water separator guidance, and calendar information.
- This source appears to be in compliance at this time.
