| COMMENTS: On June 26, 2008, I conducted an unannounced compliance inspection at the Lafarge Building Materials Fort Walton concrete batch facility. The facility was not in operation at the time of the inspection. The facility emission units consist of two silos. Emissions from both silos and the truck loading spout are controlled by one dust collector. Visible emissions testing was last conducted on July 7, 2008. During the testing, there were no visible emissions noted. The height of the aggregate piles are maintained at or below the tops of the retaining walls. | | | |
